

DC Power Supply

This unique and newly designed DC Power Module brings DC power inside the HWS 1400, 2800, 4200 series enclosures. It provides overload/short circuit protection, fully-regulated, and high quality DC power for any active modules with 12VDC and now selectable 7.5VDC or 5.0VDC input voltages.

Furthermore, its compact size saves space to allocate more HWS modules compared with the traditional AC adaptors and power strips.

With these advantages, the DC power module is the best choice for all your DC power supply needs.

A MUST HAVE!

DC Power Module

Part No.	HDP -1060	HDP -1150
Dimension: Length x Height	6.3" x 5"	13" x 5"
Output Power	60W	150W
Input Voltage	AC: 100V~240V	
Output Voltage	DC: 3 x 12V	DC: 4 x 12V
Additional Voltage	(Jack center diameter: 2.5mm)(Jack center diameter: 2.5mm) DC: 1 x 7.5 V or 5.0 V switchable (Jack center diameter: 2.0mm) for most 5-port 10BaseT Ethernet HUB or Router Switches. 1 x 12V (4-pin 5.08mm socket) for over 3A current requirement such as HAA-1404 or HAA-1408	
Features	<ol style="list-style-type: none"> 1. Save space, compared with traditional AC adaptor. 2. High efficiency, low working temperature. 3. Short circuit/over voltage/overload protections. 4. Compact size, light weight. 5. Built-in EMI filter, low ripple noise. 	

*Use HDP-1060 with HAA-1404 and HDP-1150 with HAA-1408 music modules.

AC Power Module

The AC Power Module brings AC power inside the 14", 28", or 42" enclosure. The AC Power Module provides space for two standard duplex receptacles (not included), and normally the module is placed at the bottom of the enclosure. AC power wire should exit via the grommet located at the base of the module.

DC Power Module: No more messing with plugging transformers into an outside power strip or over-crowded enclosures. Our DC power module will allow for a direct connection of 4 DC components such as cameras, network hubs & modulators, telephone data patch panels, 10 base T hub or network router/switch, IR, and the all new Audio Distribution Module.
