

## Clean larger parts with ease.

Rinse Tanks are generously sized so larger parts (up to 16" x 35" (406mm x 889mm)) can be totally immersed. All rinse tanks feature 18-gauge, lead-free coated steel construction with a tough powder paint finish for superior durability and chemical resistance.

**Floor Standing Rinse Tanks** are supported on a sturdy stand to a height of 32<sup>3</sup>/<sub>4</sub>" (832mm) for convenient access whether standing or seated. The self-close cover is foot-treadle operated so it can be opened by a worker with both hands full. An adjustable-rate pneumatic cylinder prevents the cover from slamming shut instantly (and catching a hand) when the treadle is released. <sup>3</sup>/<sub>4</sub>" drain plug allows for easy solvent replacement.

**Benchtop Rinse Tanks** sit conveniently on workbench or counter for easy access. Lift-and-latch style cover has a fusible link that melts at 165°F (74°C) and closes the cover in case of fire. <sup>3</sup>/<sub>4</sub>" drain plug allows for easy solvent replacement.

**Twin Chamber Rinse Tanks** allow workers to remove heavy grime on one side and do the final rinse in clean solvent on the other side. Other construction features are the same as the single chamber floor standing rinse tank. Each chamber has its own <sup>3</sup>/<sub>4</sub>" drain plug. Tanks are evenly divided into left and right sections.

**Sediment Screens** rest at the bottom of the tank to catch grime as it settles and allow for easy cleaning during solvent change. Constructed of 26-gauge coated steel.

**Parts Basket** speeds parts washing by carrying numerous smaller parts to be washed in a single action. Constructed of 26-gauge coated steel.
