

FlexRight™

*Start saving energy today - quickly and economically....
change every "flex wrong" to "FlexRight"*

To address the problem of creating proper inlet conditions, a simple and easy solution called "FlexRight" is available from Titus. FlexRight is a plastic 90 degree elbow that connects the flex duct to the diffuser inlet with a gentle 90 degree transition. This eliminates the problem of kinking or improper positioning of the flex duct that is so often found in the field when connected to supply diffusers.

FlexRight is made of 100% recycled materials, is UL listed and saves energy by reducing pressure loss through the duct work. The universal design accommodates all flexible duct sizes and diffuser inlets from 4" to 16". It provides a less expensive alternative to hard duct transitions and is easy to transport and install. With its simple and universal design, FlexRight is a great choice for both new construction and retrofit applications.

- FlexRight saves energy by eliminating kinks and restrictions common to flexible duct installations.
- Strap FlexRight over any existing (retrofit) or new flexible duct to improve airflow and reduce pressure loss.
- Works with any brand of commercial or residential flexible duct - insulated or non-insulated.
- Universal design fits all flexible ducts 4" - 16".

Titus, The Leader in Air Management has an HVAC solution for any application. Whether it is a ceiling installation or an underfloor application, Titus has the products to meet your needs. Contact your local Titus Representative for more information.
