

## The Titus Spectrum . . . Color, Performance, and Aesthetics in one Diffuser !!

The Spectrum offers a unique alternative when considering ceiling mounted air outlets for architectural building applications. The unique Spectrum design starts with a special arcuate (bow-shaped) faceplate that drives the aesthetic look of the diffuser. To enhance this special design, each Spectrum diffuser has a 4" x 4" color appliqué added to the center of the faceplate.

The appliqué is available in nine standard colors, as well as custom color matches or company logo. The combination of appliqué color schemes along with the various diffuser paint finish options provide the architect with a multitude of design options to compliment and enhance a building's décor. Appliqué's can also be ordered separately for field application or retrofit if a building's décor changes.

- Unique architectural face design with center appliqué (nine standard colors)
- Customer color matches and company logos available
- Appliqué sold separately for field application & retrofit
- Hinged removable faceplate is sold separately for retrofit of existing Titus perforated diffusers without removal of backpan or ductwork
- Excellent choice for VAV systems. The 4-way air pattern remains tight and horizontal even when the air volume varies over a wide range
- 24" x 24" module size with square or round inlets
- Heavy gauge steel construction
