18	5.85	18.060	19.280	10GA	1.36	8.20

Felker Stainless Steel Quick Clamps were designed for low pressure service applications. They have been used successfully in food, dairy, paper, chemical, and sewage treatment plants for several years. Quick Clamps are used for connecting pipe and fittings or are used with a solid disc for blanking the end of pipe. 1/8" thick neoprene gaskets are furnished with clamps. Two special face rings are required and must be ordered separately per the chart above.
