

Meter Connection Products: Meter Sets

Meter Sets

Georg Fischer Central Plastics is proud to offer a line of high performance, high quality gas meter products that are safe and economical. Our line of pre-fabricated meter sets, bends, loops, and components reflect over 50 years of common-sense engineering for the gas utility industry.

Our common-sense design replaces pipe fittings with formed pipe, thus replacing dangerous leaky joints with continuous pipe. Why mess with multiple parts, threaded joints, and long installation times when you can use **pre-fabricated parts that come built to your specifications.** Or order from our complete line of the most popular configurations of fully fabricated meter sets, meter frames, meter bends and components. The finished installation will not only take less time to assemble and be safer for the homeowner but will look more finished and professional.

Features/Benefits

- Reduce on site labor cost. Meter setting installs in minutes.
- Fewer threaded joints eliminates risk of gas leaks, increasing safety of meter setting.
- Inventory control results from having to stock fewer meter setting parts and accessories.
- Several popular configuration available.
- State of the art coating capabilities coupled with the most advanced materials allow for years of corrosion protection.

Options

- Customized assemblies can be designed to meet your specific needs.
- Engineering capabilities to help develop and design a meter set that will fit your needs.
- Can be coupled with support brackets or support stakes.

All regulators, valves, and unions are per customer specification. Any configuration can be produced using our robotic welding system and automated assembly equipment. Systems can be customized using your specifications or can be designed by one of our in-house design engineers.
