

## THE TECHNOLOGY:

The technology or structure behind each of the oil only products helps determine the strength and absorbency of each sorbent. This information along with the product's characteristics (grade, perforations, etc.) is what helps you decide which sorbent is best for your application

All of these oil only pads and rolls start with a highly absorbent meltblown polypropylene (MBPP) core - the difference is what happens from there...

<b>ENV:</b>	Pure and simple – now MAXX enhanced, it's a single ply, economy product.	 single ply meltblown
<b>SR:</b>	Single ply (ENV Grade) specially treated to resist static build up.	 single ply meltblown
<b>SPC:</b>	Still single ply and made with MAXX, but heavier – featuring dimples and perforations.	 single ply meltblown
<b>OIL PLUS:</b>	MBPP coverstock is added to the core for additional durability and absorption capacity. Also, the coverstock generates less lint than the core material.	 meltblown meltblown meltblown
<b>SXT:</b>	Spunbond coverstock is added – making it virtually lint free, exceptionally strong, wringable and re-usable.	 spunbond meltblown spunbond

SPC sorbents are ideal for disposal by incineration – incinerating to less than .02% ash.

### May We Also Suggest...

Try oil only SOC's or pillows. These flexible products fit into odd spaces, mold around corners and conform to uneven surfaces. SOC's are featured on page 26 while pillows appear on page 28.
