The AZ-300B harnesses the power and productivity of much larger reclaimers into a portable and affordable attachment, turning your backhoe into a high-powered reclamation machine. Powered by John Deere (Tier 3) Turbo Diesel engines, the AZ-300B will pulverize up to 10-inch thick asphalt in a single pass. The Asphalt Zipper® patented Versa-Mount universal bucket mounting system enables easy connection to the widest possible range of backhoes. Easy to read and access controls and gauges along with active-hydraulic depth control and manual top hatch make it simple to use and maintain. Computer engineered cutter heads with replaceable bullet-head carbide tipped cutting teeth produce pulverized material with exceptional gradation that can be reused as road-base or backfill. Street patches, full road repairs, base stabilization and opening utility trenches in asphalt are just a few of its many uses. The AZ-300B transports easily on its own custom trailer behind a 3/4 ton pickup truck.

* Other cut widths available.

** Based on average asphalt thickness up to 5-6" thick. Assumes max horsepower. Actual results may vary depending on asphalt hardness, temperature, oil content, age, desired grind, etc.

*** Weight with standard options equipped, without trailer and without fuel.

Specifications subject to change without notice.
