

# Hot Patch Heater

**The “Intelligent”  
Solution for all Your  
Asphalt Patching  
Needs**

## Advantages:

- Uses your own truck's engine coolant to heat the asphalt mix (patented) thru a serpentine heat exchanger unit.
- No more problems with leftovers the following day; in less than half-hour of startup your mix will be reheated to a workable temperature.
- No more problems with LPG and/or electric connections.
- No more problems with burners and/or thermostats.
- We install it on your present dump truck ; we custom-build it to fit your present truck's size and capacity.

**Bucket-type hydraulic-operated rear door facilitates employee-access to the mix avoiding:**

- Accidents while trying to access the dump.
- Employee fatigue; the hot mix is handled at knee level by your employee.
- No asphalt mix is lost, door closes hydraulically returning the non-used mix to the dump.
- No more time lost due to conveyor and/or agitators breaking down.

- Includes water-tight cambered retractable tarp to prevent the mix from cooling down and hardening due to rain.
- Very simple system requiring little or no maintenance.
- “Green” solution keeps your asphalt mix hot and ready; doesn't require LPG, nor electricity, nor any fuel whatsoever.
- While you are driving to your job site the system is working and keeps your mix workable all day.

### Available Options:

- Vibratory Plate compactor “Tamper” on a 12v-powered swing-out-and-down mechanical platform.
- Coolant-heated 32 gal. insulated emulsion tank with 25ft. hose on an auto-rewind reel including an emulsion spray gun for maximum ease of spraying.
