

G-SCART

VIDEO CABLE: SCART

X-SECTION COMING SOON

G-SCART uses Silver Plated Foam Insulated 75Ω video cables and Solid Long Grain Copper audio cables for a sharper picture and more natural sound.

Silver is the single most effective way to provide clearly superior video performance. Foam insulation minimizes distortion caused by any solid material next to a conductor. Rigid 75Ω construction ensures electrical compatibility and minimum reflections.

Strand interaction is the single greatest source of cable distortion. Solid conductors eliminate this common problem. Inside a metal conductor there are actually thousands of connections between "grains." Low Oxygen content Long Grain Copper (LGC) minimizes harshness and confusion caused by these interior connections.
