

SpinetiX HMP130

The World's Smallest
Hyper Media Player

Designed
for Fusion

Overview

The HMP130™ is the unique alternative to proprietary, PC based solutions for digital signage and allows for simple and cost effective implementations for applications as wide-ranging as advertising, transportation, hospitality, finance, and live events.

Designed for SpinetiX® Fusion Software, the HMP130 offers a new and simplified way to upload content, create playlists, populate template layouts, schedule programs and manage devices from any web browser.

Small & Robust

The HMP130 stands out with its amazingly compact size. You can hide it nearly anywhere. The HMP130 is exceptionally robust and especially well suited for harsh environments thanks to the fanless design and the absence of any moving hardware parts.

Time Synchronized

All HMP130 devices on the network are time synchronized and work together seamlessly. Video walls of any size can be created and managed with ease.

Open

SpinetiX's digital signage solutions are based on open protocols and formats. As a result, with standard web based skills and freely available technologies, integration is straightforward and cost-effective.

Green

The power consumption of a HMP130 in action is only 3W. That's 33x less than a typical digital signage PC, which uses around 100W! As power costs increase around the world, HMP offers significant savings for the environment and your wallet over time.

Serverless & Standalone

The HMP130's do not require a proprietary server or network technology. SpinetiX, allows you to use existing infrastructure and avoiding expensive recurring license fees.
