

Emergency Notification System

- Wireless school-wide instant audio-visual notification
- Wide selection of PA speakers, LED displays & strobes
- Can be used for daily PA announcements and bell alerts
- Easy system installation and expansion

The Visiplex AlertWave is a turnkey wireless emergency notification system that provides instant warnings and instructions to students, visitors and personnel during emergency situations to reduce confusion, injuries and casualties. In the event of a school emergency, the AlertWave system will instantly issue audible and visual alerts followed by live voice or pre-recorded messages instructing people how to respond using simple and clear language. The AlertWave system offers many upgrades and options such as wireless emergency call boxes, remote device supervision, integrated power backup, secured communication modes, solar power packages and more.

Personnel Notification System

- Wireless classroom emergency link to security personnel
- Instant alerts to pagers and/or alphanumeric LED displays
- Enabling a fast response to emergency situations
- Easy system installation and expansion

The PageLink system provides schools with a compact wireless call system as the simplest way to incorporate a teacher/staff member to security personnel instant communication link. Each time one of the compact transmitters is activated from a specific classroom, a detailed text message with the classroom information is transmitted directly to a security personnel pager or central location alphanumeric LED display, enabling a fast and effective response to emergency situations. Visiplex compact wireless transmitters can be used in the form of a pendant, belt clip or wall mount.
