

CONSTRUCTION STYLES

Standard Compartment Styles

FLOOR MOUNTED

Floor mounted compartments are recommended where ceiling heights make installation of ceiling supported compartments impractical and where overhead bracing is not required.

CEILING SUPPORTED

Ceiling supported compartments are favored installations in construction with drop ceilings or span type ceiling systems. Ampco's ceiling supported compartments also offer unobstructed floor surface for easy maintenance.

OVERHEAD BRACED

Overhead braced compartments are recommended where structural rigidity is a necessity, especially where building construction and high ceilings prevent other types of installations.

FLOOR TO CEILING

Floor to ceiling supported compartments are a popular Ampco® solution providing a sturdy installation. Mounting at the floor and ceiling eliminates the need for overhead bracing without sacrificing the rigidity and strength of the restroom compartments.

CONSTRUCTION STYLES

No-Sight Line Construction Style

EUROLINE™

Ampco Euroline™ restroom compartments offer unsurpassed security and privacy achieved with a 6 inch(150 mm) floor clearance and a door mounting system that eliminates see-thru gaps. Euroline is available in High Pressure Laminate, Solid Phenolic Core, Solid Surface and Solid Surface Veneer.

Hardware Considerations

All components are constructed of heavy duty aluminum, finished with an attractive and durable powder coating process. Tamper resistant fittings and nylon bearings provide corrosion resistance. Hardware is blister packed to provide easy on-site storage, identification and installation.

Durability

The Euroline HPL Compartments are faced with high pressure laminate on all surfaces, and the Phenolic range is constructed for an even greater resistance to impact and high humidity levels. Solid Surface material is impervious to water, moisture and heat. They offer practical elegance and repairability. All systems provide strong tamper-proof, corrosion resistant hardware.

euroline Classic compartments system is an unframed system with a clean look on the top line with concealed angle bracing mounted to infill panels of the same material between door openings.

euroline METRO compartment system utilizes a satin finished aluminum tubing anchored to the top of each stile and braced to all walls with hardware of the same finish. The system would be considered when applications require increased structure and stability, but aesthetic lines and looks are demanded.
