

911 MK3 POWER AMPLIFIER

TOP LINE

The 911 MK3 stereo power amplifier is our second-largest amplifier and one of the most powerful on the global market.

The big wattage giant is considered to be one of the fastest power amplifiers in the world. Based on insights gained from the design of the much-acclaimed 909 model, it

has been continually improved and developed and, as version MK 3, has already reached the third generation.

The 911 MK3 can continuously supply high current in a seemingly effortless manner, and can thus easily power loudspeakers with low impedance values and very complex

loads. This amplifier is held in high esteem on account of its warm and detail-rich sound. In fact, the 911 is unsurpassed in its ability to decipher minute details at extremely high volumes on the best loudspeakers in the world.

956 MK2 POWER AMPLIFIER

CLASSIC LINE

The 956 MK2 stereo device complements the Burmester family of amplifiers that has been accorded numerous international awards. The high-quality internal cables enable

the amplifier's high current to flow unimpeded to the large loudspeaker terminals. Thus the sound of the 956 MK 2 amplifier is characterized by excellent spatialization, musical

warmth, and a minimal level of distortion.

036 POWER AMPLIFIER

CLASSIC LINE

The 036 stereo power amplifier combines a more compact design with many of the features of the more imposing Burmester power

amplifiers. The structure is again symmetrical and the device is entirely DC-coupled. An intelligent protective circuit monitors the ope-

rating status with regard to temperature, DC offset and power surges.
