## Multi-parameter, probeless meters allow rapid spot checks of clean water applications and tap sampling.

Hach's MP Meters offer single-handed operation for clean water applications, thanks to their probe-free design.

### Go Probeless!

Hach's MP Meters work without probes, allowing rapid testing of pH, ORP (Oxidation Reduction Potential)/Redox, conductivity, resistivity, Total Dissolved Solids (TDS) and temperature. The instruments use integrated sample cups for efficient, high-throughput testing.

### Simple, One-Handed Operation

MP Meters operate easily with just one hand. Whether in the lab, plant, or in a remote field location, measurement takes only two steps: 1. Fill the cell cup and 2. Push a parameter key to take the reading.

### Infrequent Calibration

Achieve reliable readings without repetitious calibration. Typical calibration frequency ranges from every two weeks to monthly, depending on parameter and individual testing needs.

### Superior Accuracy

MP Meters use an advanced four-electrode conductivity cell technology, a unique, replaceable pH/ORP sensor, and powerful microprocessor-based circuitry to deliver high performance with a superior accuracy of  $\pm 1\%$ . Pre-programmed common salt profiles in every instrument provide unsurpassed accuracy for conductivity, resistivity, and TDS measurements across a wide variety of sample matrices.

### Field Reliable

An auto-shutoff maximizes battery life. In addition to longer operation time, MP Meters maintain data integrity thanks to a non-volatile microprocessor that backs up measurement data and retains calibration and memory data, even during a battery change. MP Meters are also waterproof, buoyant, and fully operational after immersion up to 1 meter (3 feet).

### Flexible Communication

The optional USB-powered MP-Dock Accessory Package and MP DataLink Software reduce data logging time and errors, and allow fast, easy download with the flexibility to export as a .CSV file.
