

# PowerTrap,

## MODEL GP5C

#### SECONDARY PRESSURE DRAINER FOR PUMPING APPLICATIONS

#### **Benefits**

Pump with a linear inlet/outlet and low filling head. Ideal for low flow condensate removal from vented receivers situated at a low level in open systems.

- 1. No cavitation or seal leakage.
- 2. Non-electric design with durable compression spring for reliable performance.
- 3. Extremely low filling head. (min. 6")
- 4. Compact design and linear inlet/outlet reduce installation space, time and cost.
- 5. Easy, inline access to internal parts simplifies cleaning and reduces maintenance costs.
- 6. High-quality stainless steel internals and hardened working surfaces ensure reliability.
- 7. Float resists shock to 1600 psig.

### **Specifications**

Model			GP5C		
Body Material			Cast Iron	Cast Stainless Steel	
Campastian	Pumped Medium Inlet & Outlet		Screwed		
Connection	Motive Medium & Pump Exhaust		Screwed		
	Pumped Medium: Inlet x Outlet		1″ × 1″		
Size (in)	Motive Medium Inlet		1/2		
	Pump Exhaust Outlet		1/.	1/4	
Maximum Operating Pressure (psig) PMO		PMO	75		
Maximum Operating Temperature (°F) TMO		TMO	365		
Maximum Allowable Pressure (psig) PMA		PMA	150		
Maximum Allowable Temperature (°F) TMA		TMA	428		
Motive Medium Pressure Range (psig)			5 - 75		
Maximum Allowable Back Pressure			7 psi less than motive medium pressure used		
Volume of Each Discharge Cycle (gal)			Approximately 3/8		
Motive Medium*			Saturated Steam, Compressed Air, Nitrogen		
Pumped Medium**			Steam Condensate, Water		

Connections and sizes in bold are standard

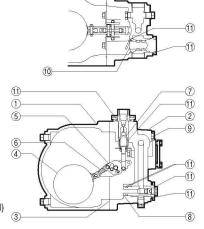

\* Do not use with toxic, flammable or otherwise hazardous fluids.

\*\* Do not use for fluids with specific gravities under 0.85 or over 1, or for toxic, flammable or otherwise hazardous fluids.

To avoid abnormal operation, accidents or serious injury, DO NOT use this product outside of the specification range. Local regulations may restrict the use of this product to below the conditions quoted.

### **Dimensions**

Note: All Plug Holes are NPT % () is for Stainless Steel

## **Discharge Capacity**

Filling Head: 6" from Grade

Inlet Pipe Size		1"		
Inlet Check Valve		Built-in		
Outlet Check Valve		Built-in		
Motive N	<b>M</b> edium	Air	Steam	
Motive Medium Inlet Pressure (P <sub>m</sub> ) (psig)	Total Lift or Back Press. (P <sub>2</sub> ) (psig)	lb/h	lb/h	
	5	390	320	
	15	350	280	
	25	300	230	
75	35	260	190	
	50	200	140	
	65	140	80	
	68	120	70	
	5	370	310	
	15	330	270	
05	25	280	220	
65	35	230	180	
	50	170	120	
	58	130	80	
	5	350	300	
	15	300	250	
50	25	240	200	
	35	190	130	
	43	150	100	
	5	320	270	
35	15	250	200	
35	25	180	140	
	28	170	120	
	5	290	240	
25	10	240	210	
	18	190	150	
15	5	250	200	
15	8	210	160	

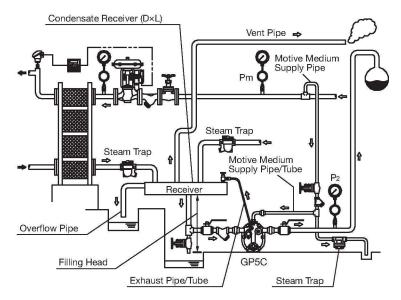

#### Correction Factor

For GP5C installed with filling head other than 6" (minimum)

Filling Head from Grade	Correction Factor	
40"	2.82	
30"	2.60	
20"	2.33	
16"	2.13	
12"	1.94	
8"	1.50	
6"	1.00	

### **Illustration of Filling Head and Pressures**

The discharge capacity is determined by the motive medium, motive medium pressure (Pm) and back pressure (P2).

Make sure that:
Discharge Capacity × Correction Factor
> Required Flow Rate

For explanation purposes only, not intended as installation designs.

#### NOTE:

- GP5C should be used in an open system in which the receiver is open to the atmosphere.
- Motive medium pressure minus back pressure must be greater than 7 psi.
- The motive medium supply pipe diameter should be at least 1", and the motive medium supply pipe/tube and its fittings/valves should have an inner diameter of at least 1/4".
- A 40 mesh or finer strainer must be installed at the motive medium and pumped medium inlets.

#### Size of Receiver

The receiver must have a capacity sufficient to store the condensate produced during the **PowerTrap** operation and discharge. A receiver that must handle the condensate both as a liquid and as flash steam will generally be larger than a receiver that handles condensate only as a liquid, and should separate one from the other so that only condensate is sent to the **PowerTrap**. When supercooled condensate is pumped, there may be cases in which hardly any flash steam is produced.

## 1 Size of Receiver; flash steam is involved (Length: 3.5 ft)

Flash steam up to (lb/h)	Receiver diameter (in)	Vent pipe diameter (in)	Overflow pipe diameter	
50	3	1	Overflow pipe diameter should be equal to or greater than the condensate inlet pipe diameter.  Diameter for receiver must be equal to or more than 3× the overflow pipe diameter.	
75	4	1 1/2		
100	4	2		
200	6	21/2		

## ② Size of Receiver; flash steam is not involved (Length: 3.5 ft)

Amount of condensate (lb/h)	Receiver diameter (in)	
75 or less	1	
200	11/2	
400	11/2	
600	2	
800	21/2	
1000	3	

Reservoir length can be reduced by 50% when the motive medium pressure (Pm) divided by back pressure (P₂) equals 2 or greater (when Pm ÷ P₂ ≥ 2).

Memo:

DO NOT DISASSEMBLE OR REMOVE THIS PRODUCT WHILE IT IS UNDER PRESSURE.

Allow internal pressure of this product to equal atmospheric pressure and its surface to cool to room temperature before disassembling or removing. Failure to do so could cause burns or other injury. READ INSTRUCTION MANUAL CAREFULLY.
