Computer Based Learning Tools

With computers integrated into everyday learning applications throughout K-12 schools, students benefit from proficiency with digital tools at every grade level and subject area. These tools are designed for little hands, support computer-based learning and are developmentally appropriate for your youngest students.

Designed for accessibility and ease of use for everyone, our QWERTY formatted keyboards are color coded to help teach beginning typists, and our computer mice make it simple for students of all ages to become engaged with the lesson. Older students will appreciate the flexibility and functionality of our Bluetooth-compatible keyboard and ergonomically correct device viewing stand. Administrators will benefit from the fact that Califone's computer peripherals are made from tough ABS plastic - so there's no need to worry about breakage.

Oversized Keyboards

Ideal for beginning keyboarders, these plug-and-play extra large keyboards make it easy for students to learn keyboarding fundamentals. Color-coded and 90% larger than our standard keyboard, they easily connect with tablets and other devices while meeting specifications for their use during high stakes testing.
KB2 USB plug $45.00
