KB4 Bluetooth Keyboard

Smartphones and tablets are convenient if only listening or viewing is involved. Typing on them becomes cumbersome and problematic since the virtual keyboard occupies too much onscreen space. The Bluetooth keyboard takes care of that problem. Use it for typing while working from any Bluetooth-enabled mobile device. The Bluetooth KB4 offers full-sized connectivity. It enables you to type as you learned, but on a wafer-thin design that's as unobtrusive as the device itself. Once the KB4 is synced to any Bluetooth enabled iOS, Windows, or Android device, the device's virtual keyboard disappears. This means students will see the entire display, meeting key PARCC & Smarter Balanced requirements and EPPA21, NCSC, WIDA and DLM standards.

KB4 \$53.10

KB4Pack keyboard bundled with 3068AV and TPT Tablet stand \$77.90

Smartphone & Tablet Stand

Maximize use from your mobile device with this ultimately flexible stand. The TPT fully adjusts to hold tablets and even larger smartphones to an ergonomically correct angle. Its stable base and two-part spine can be molded to prop up tablets such as the iPad, Galaxy Tab and Kindle Fire in either landscape or portrait modes.

TPT \$11.00

*Adjusts for
smartphones
& tablets*
