

EZ6000 Series

Chromium Trace Metal Analysers

Applications

- Drinking water
- Surface water
- Industrial effluent

Trace metal analysis of dissolved hexavalent Chromium in water by online voltammetry

About the 6000 Series

The EZ6000 Series of online Trace Metal Analysers are based on the technology of stripping voltammetry, a sensitive analytical technique that can be automated for the determination of trace levels of metals in water. For many metals the EZ6000 Series boasts limits of quantification in the low ppb range.

The optional combination with an external filtration system allows for detection and measurement of trace metals in a wide range of water matrices.

The **EZ6000 Series Analysers** combine tried and tested voltammetry technology in an industrial mainframe with prime features:

- Excellent selectivity and sensitivity
- Standard measuring ranges with optional internal dilution
- Smart automatic features
- Control and communication via industrial panel PC
- Analog and digital output options
- Multiple stream analysis

The **EZ6003 Chromium Analyser** is equipped for the determination of dissolved hexavalent Chromium Cr(VI).
