

LISTENING CENTERS & MEDIA PLAYERS

For Many Students, Hearing is the Fastest Route to Understanding

Califone group listening centers support auditory learners in customized learning situations ranging from classroom-wide audio amplification to wireless assisted listening, hearing systems and personalized sound fields. They provide audio modeling in speech language, special education, literacy, bilingual and ESL reading situations and can help teachers address students' phonics, phonemic awareness, and vocabulary and comprehension skills. Califone stereo listening centers are often used in higher fidelity applications such as multimedia and technology-oriented computer applications.

A commonly used teaching tool, our powered (media player supplied) Listening Centers are available with your choice of CD/Cassette, Boombox or DVD Player as well as wired or wireless options. Non-powered Listening Centers connect with your own player to transmit auditory information.

Performer Plus™

Using the Performer Plus to differentiate instruction helps students who need more time to master essential skills. Students can slow down the speed or listen as many times as necessary for comprehension. Other features include remote control for freedom of movement around the classroom, and a voice-over function you can use for announcements or emergencies. No separate jackbox is needed as headphones plug directly into the back of the media player. The Performer Plus reads and plays CD-R/ RW and MP3 CDs. 2455-04 is AC only and comes with a detachable power supply.

2455PLC Performer Plus Listening Center (five 2924AVPS headphones, no jackbox necessary) \$614.80
