Coded Value Adder

A Value Transfer Machine for Multi-housing Applications
That Can Add Value to SmartCards Without Cash

The Coded Value Adder VTM (CVA) is designed to add value to a SmartCard through the use of a generated code. The customer is instructed to visit a web site, or call a telephone number where they will specify an amount of value to be added to their card by exchanging their credit or debit card information for a numeric code. Once the code is obtained, the customer can go to the laundry where the CVA is located, they will insert their SmartCard into the CVA, enter the code on the keypad and the authorized value will be added to their SmartCard. All of this is made simple with a bi-lingual (English and Spanish) interface that directs the customers through each step.

The CVA is good for both customers and the operator; it eliminates the need for collections since no cash is accepted at the machine. Because there is no cash, a more secure environment is created in the laundry. An additional benefit is that the CVA can be used to give instant refunds. If a machine fails, the customer can call a posted phone number and be given a code to replace the lost value on their card.

Front Access Only —11-100-209
