Aquatic Weed Harvesters are Like Lawnmowers for Aquatic Weeds

Aquamarine aquatic plant harvesters are hydraulically driven with reciprocating knives mounted on the harvesting head to cut the aquatic vegetation. The vegetation is then transferred onto the conveyor system located on the closed deck barge. The storage conveyors are gradually filled up with tightly packed plants and this harvested biomass is then transferred to the shoreline or into a dump truck via a shore conveyor.

Aquamarine designs and manufactures aquatic weed harvesters in a range of sizes to meet our customer's needs.

Please review our various models from H5 to H11. You are invited to complete a [site and operational information questionnaire](#) to help us to assist you in selecting the appropriate model.

In addition to our standard aquatic weed harvesters, Aquamarine also designs and manufactures custom equipment. For more information please visit the [custom equipment](#) page.
