Aquifer® Water Filtration System

Safer Water Starts Here

THE BOLD LOOK
OF **KOHLER**®

Clean Water Matters

Every day you fill your glass with water and take a sip. But do you know what's actually in your glass? With aging infrastructure including old pipes, contaminants like lead have a known effect on water purity. However, lesser known are the pharmaceuticals such as pain relievers or hormones that can be found in your drinking water. To help combat all of those contaminants, we've come up with a solution.

Raise Your Glass to Aquifer®

The Aquifer water filtration system effectively reduces contaminants such as lead, mercury, chlorine and pharmaceuticals in your cold water to give you peace of mind.

Why Choose Aquifer®?

It's Efficient

Whether you are cooking or cleaning, Aquifer filters water without compromising your faucet's performance. Choose between one filter cartridge with a 0.85 gallons per minute (gpm) flow rate or two cartridges with a 1.7 gpm flow rate. A single cartridge is ideal for beverage or bar faucets, while two filter cartridges are suggested for use with regular kitchen faucets and multiuse faucets that offer a greater flow rate.

0.85 gpm

1.7 gpm

It's Available With a Filter Subscription Service

You shouldn't have to think about when your water filter needs to be replaced. To make that process effortless, we offer a filter subscription service upon purchase allowing you to sign up to automatically receive a new filter every 3, 6, 9 or 12 months. With normal use, the average filter life is six months.

It's Designed With You in Mind

Aquifer has an easy-to-install design that saves you time and headaches. Plus, it allows plenty of room beneath the sink for storage and appliances.

It Reduces Waste

While some other water filter systems use coal-based filters, the Aquifer® filter medium is made out of biodegradable ground coconut shells. Replacement cartridges are delivered with a postage-paid envelope, making it quick and easy to return your used filters for recycling as well.

It's Completely Compatible

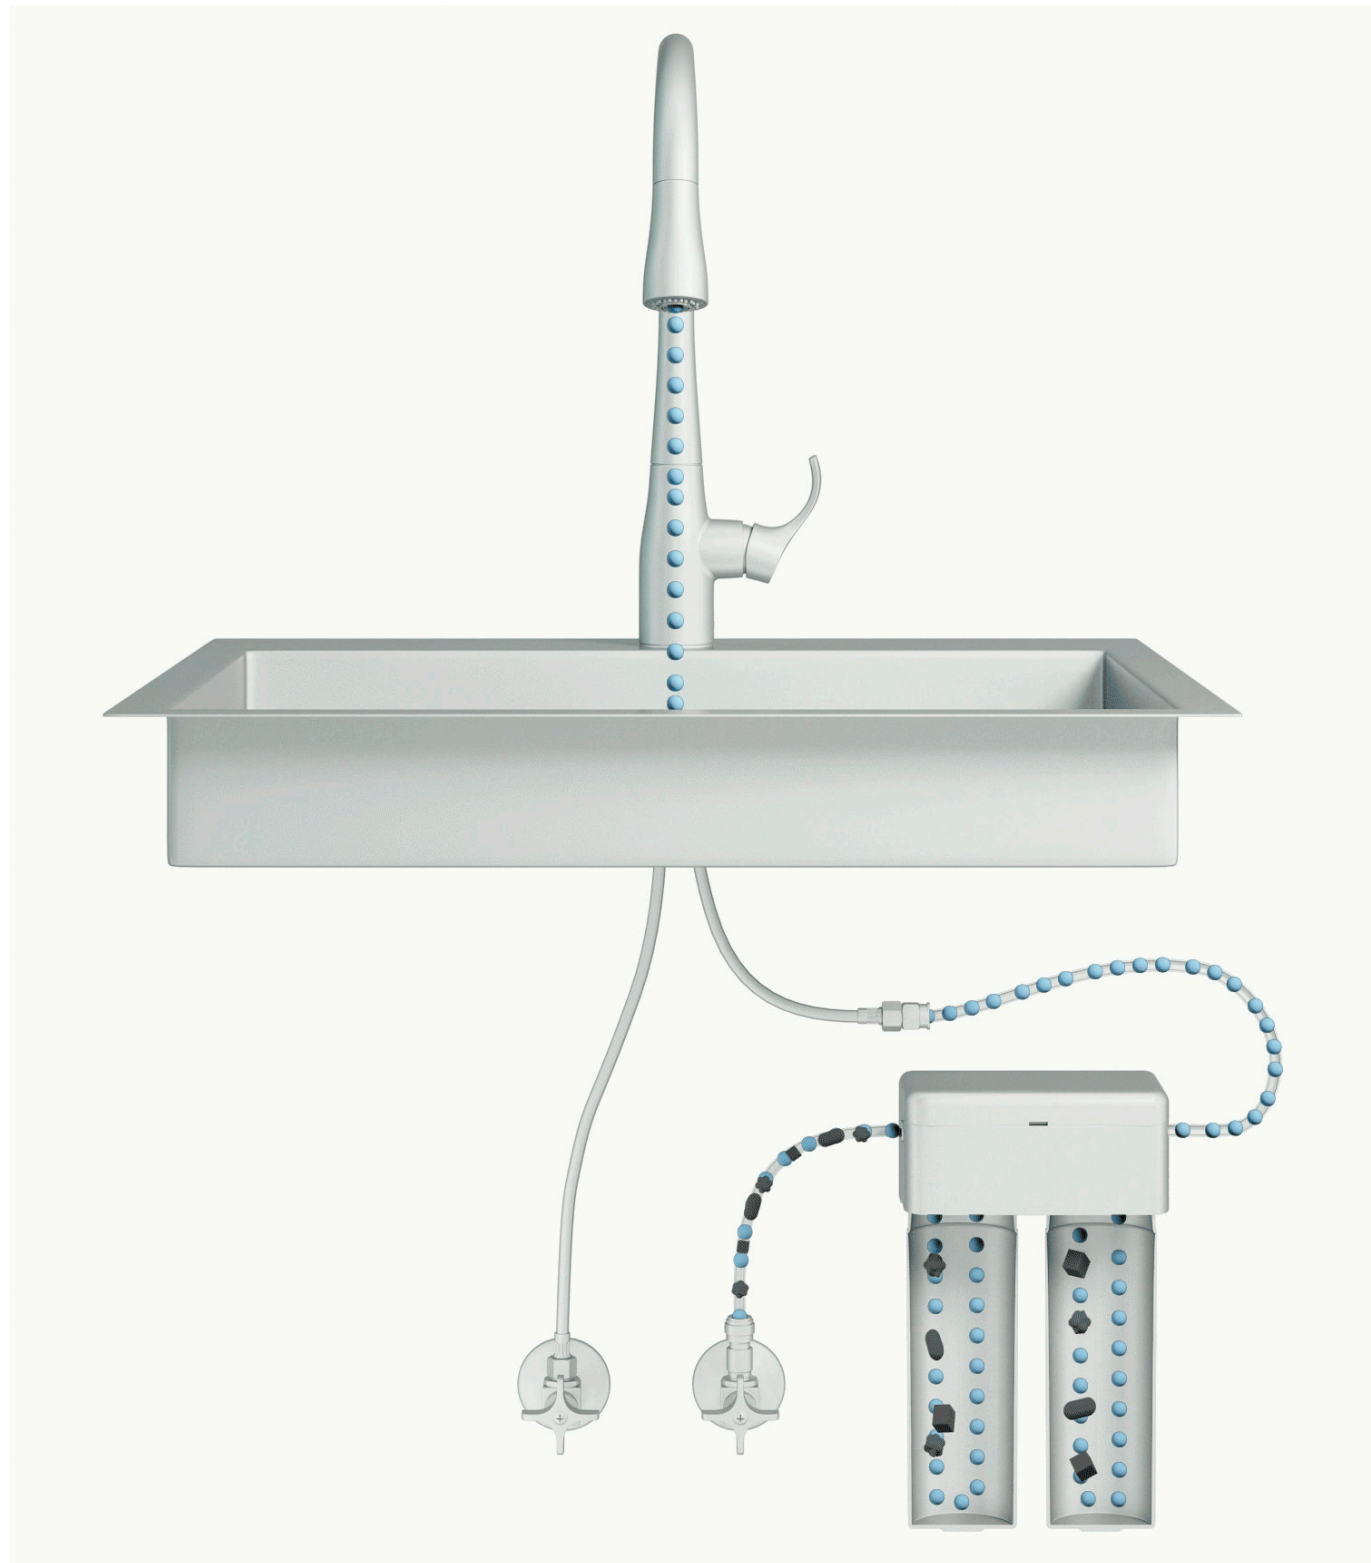

Aquifer is ideally suited for beverage faucets like the KOHLER® Wellspring faucet, but it is also compatible with any kitchen or bathroom sink faucet.

Beverage Faucet

Kitchen Faucet

It Filters More*. Period. End of Story.

We want to make sure that every drop of water you consume is clean, because there's nothing more important than your health. Check out the contaminants Aquifer_® eliminates and how it stacks up against other water filtration systems.
