M-SERIES ENERGY RECOVERY VENTILATOR INDOOR SIDE BY SIDE DISCHARGE

STANDARD CONSTRUCTION

CABINET

20 (1.0) gage galvanized steel.

PANELS

18 (1.3) gage galvanized steel.

FINISH

Polyester Resin based powder coat.
Hammer Gray.

WHEEL

ARI rated Internal Enthalpy Wheel.

FILTERS

Intake and Exhaust: 2" Pleated

TEMPERATURE LIMITS

+10°F (-12°C) to. +115°F (+46°C).

OPTIONS

- Low Ambient Kit (LAK)
- Start-Stop-Jog (SSJ)
- Disconnect for Field Installation (Disc)
- Rotation Sensor (RS)
- Pressure Sensor (PS)
- Medium and High Pulley Kits (M or H)
- Dirty Filter Switches (DFS)
- Variable Frequency Drives (VFD)

Dimensions shown in parentheses () indicate millimeters.

FEATURES

"M" series energy recovery ventilators are designed for use inside a building for applications that require "side-by-side" duct. Typically these units are installed in a mechanical room or mounted above a ceiling. Both the outside air intake and the exhaust air have duct systems to an outside source. The return air and supply air also are ducted. Balancing dampers should be utilized to help control the air volumes.

ERV with Horizontal Ductwork

ERV Model	CFM Range	Dimensions (in inches)								
		A	B	C	D	E	F	G	H	I

	High Speed

M SERIES ERV SUGGESTED SPECIFICATION

Furnish and install, at locations shown on plans or in accordance with schedule, mechanical cooling and/or heating system complete with a stand alone Energy Recovery Ventilator (ERV). The Energy Recovery Ventilator will contain an energy recovery component rated in accordance with ARI Standard 1060 with ratings certified by ARI. ERV shall be designed for ducting to the A/C (rooftop, upflow, horizontal) unit into the duct system of an air conditioning unit or as a stand alone unit with its own duct system. The cabinet shall be galvanized material with a powder coated paint finish electrostatically bonded to the metal. Cabinet panels where conditioned air is handled shall be fully insulated to prevent condensation and minimize sound. Openings shall be provided for duct connections. Lifting devices shall be provided for rigging. Test ports shall be provided so airflow can be measured across the energy recovery wheel. The intake and exhaust air blowers of the ERV shall contain a centrifugal forward curved blower. They shall have ball bearings with adjustable belt drive and motor mount base shall permit ease of motor change-over and belt tension adjustment.

The energy recovery device shall be a rotary heat exchanger per ARI Standard 1060 description. The device will be an enthalpy wheel coated with a silica gel desiccant by a patented process without the use of binders or adhesives which may plug the desiccant aperture. The substrate shall be a lightweight polymer. Desiccant shall not dissolve or deliquesce in the presence of water or high humidity. The wheel shall be easily cleanable with water and/or alkaline based coil cleaning solution. In all size units the wheel shall be provided with removable segments for cleaning and maintenance.

All diameter and perimeter seals shall be provided. The energy recovery cassette shall be an Underwriters Laboratories Recognized Component for electrical and fire safety.

ERV unit to have 2" pleated filters on the intake and return air sides. ERV shall be provided with a single point power connection for high voltage. Energy Recovery Ventilator shall be Ruskin "M" Series for indoor use in a side-by-side configuration.

OPTIONS (specifier select as required)

Low Ambient Kit - Furnish and install a low ambient kit to prevent frost formation on the energy recovery wheel.

Stop-Start-Jog - Furnish and install stop-start-jog controls to stop wheel rotation during economizer cycle operation.

Disconnect - Furnish disconnect box for field installation.

Dirty Filter Switch - Furnish and install dirty filter switch.

Rotation Sensor - Furnish and install rotation sensor to verify wheel rotation.

Pressure Sensor - Furnish and install pressure sensor to confirm airflow performance.
