

N SERIES

Air-Cooled Condensing Units - Technical Catalog

**Featuring Copeland™ Compressors
448A and 449A with Refrigerants**

STANDARD FEATURES

- Direct drive condenser fans
- Fan motor contactors
- Poly-coated fan guard
- Liquid receiver with relief valve
- Receiver inlet and outlet ball valves
- Refrigerant charging Schrader port
- Compressor contactors
- Compressor overload protection
- Crankcase heater
- Compressor service valves
- Vibration isolation under compressor
- Discharge vibrasorber
- Head cooling fans when applicable on low temp units
- Separate sub-cooling circuit
- Fan motor overload protection
- Oversized, NEMA 3R control panel (to facilitate field-added electronic system controls) with hinged door
- Pre-wired electrical controls
- High pressure safety
- Low pressure operating control
- Rigging holes
- Electronic oil control
- Run/Pumpdown switch
- 12 FPI max condensing surface
- Oversized high-efficiency condensers
- Condenser coil cleanout access
- Wiring raceway

APPLICATIONS

Century's N Series outdoor air cooled condensing units are specifically designed for commercial and industrial refrigeration duty cooling applications. They come completely pre-piped and wired with vertical air discharge. They also utilize a unique horizontal condenser and coil design and high volume condenser fans. Each unit is provided with a separate sub-cooling circuit to maximize unit performance. The N Series condensing unit is suitable for mounting at ground or rooftop levels.

N Series condensing units can be applied between the operating saturated suction temperatures of -40°F and 45°F, depending on the unit selected and the refrigerant utilized. For higher or lower operating temperatures, contact your local Century Representative.

N Series condensing units can be matched with Century Refrigeration's EPIC, FV Series, FH Series, BALV Series, A Series medium profile unit coolers, BOC Series large profile unit coolers, PFE Blast Cooler/Freezer unit coolers, WIBR Series unit coolers, and XBOC Series unit coolers. Applications ranging from low temperature product storage, produce ripening, or medium temperature product storage can be readily supported by the N Series condensing units.

Each N Series unit is designed to meet the demands of multiple load applications required for commercial and industrial refrigeration.

Refrigerants 448a and 449a are available to meet your product application. POE oils are utilized in units for these refrigerants. Consult your Century Representative for additional refrigerant application

U.S. DEPARTMENT OF
ENERGY

Fully Compliant with 2020 DOE Requirements

AVAILABLE OPTIONS

- + 20°F fan cycle with digital control (ambient temperatures at or above +20°F)
- 0°F fan cycle with digital control (ambient temperatures at or above 0°F)
- A20 flood control with receivers (ambient temperatures at or above +20°F)
- B20 flood control with receivers (ambient temperatures below +20°F, positive start feature)
- VFD compatible condenser fan motors with controller mounted
- Title 24 packages
- 850 RPM fan motors and optional low sound blades
- Special high air fan blades for high altitude locations
- Liquid line solenoid, mounted or shipped loose, with or without manual lift stem
- Liquid line drier (with or without replaceable core) & sight glass
- 3 valve bypass (liquid drier)
- Drier isolation valves
- Full port charging valve
- Hot gas discharge muffler
- Suction accumulator with or without heat exchanger
- Suction filter with or without replaceable core
- Suction vibrasorber, mounted
- Oil separator
- Control circuit transformer
- Convenience outlet (115v/15amp/with transformer)
- Unit circuit breaker with through-the-door operator
- Painted cabinet
- Defrost time clock
- Fused defrost heater contactor
- Fused evaporator fan contactor
- Fused defrost circuit
- Fused evaporator fan circuit
- Unit phase failure monitor
- Hot gas bypass
- Receiver insulation
- Compressor head cooling fan
- Cylinder unloading on most compressors
- Alarm circuit with dry contacts
- Adjustable guarantee off timer (GOT)
- Off/Pumpdown/Run switch
- Electrical door interlock
- Indicator lights (LED)
- Elapsed time meter
- Acrylic coated fin coil
- Single circuit option on dual compressor unit (includes oil separator with reservoir and individual floats)
- Electronic room thermostats mounted in unit with sensor shipped loose
- Mechanical or electronic room thermostat, shipped loose
- Contact your local Century Representative for other requested special options

NOMENCLATURE

MODEL KEY N S C 03 L 8A

Series Name _____

Number of Compressors _____

S - Single
D - Dual

Compressor Type _____

C - Copeland

Refrigerant Type

8A - R448a

9A - R449a

Temperature Range

H - High

M - Medium

L - Low

Nominal Horsepower

WHEN ORDERING PLEASE SPECIFY:

- Complete Model Number
- Refrigerant
- Room Temperature
- Saturated Suction Temperature
- Electrical Characteristic
 - Unit (Voltage/Phase)
 - Control Voltage
- Accessories

Note: Dual units are standard with dual electrical and refrigerant circuiting.

CONSTRUCTION

Cabinet

The rugged, industrial grade cabinet is constructed of heavy gauge, mill galvanized steel. Rigging holes are provided in the formed, full-perimeter channel base. Compressors are mounted low in the cabinet for ease of service.

Condensers

Coils are seamless copper tube with die stamped aluminum plate fins, galvanized steel frames and tube sheets. Coils are computer selected for refrigeration applications to provide optimum heat transfer at a minimum T.D. Each unit is provided with a separate, sub-cooling circuit to maximize unit performance. Access for coil cleaning comes standard.

Condenser fan motors are industrial duty 1140 RPM, ball bearing, weather resistant, three phase with inherent electrical protection. Condenser fan blades are of finished aluminum with a corrosion-resistant coated hub.

Coils are mounted horizontally with fans arranged for draw through, vertical discharge air flow. Each fan assembly is equipped with a sturdy poly-coated steel fan guard.

Liquid Receiver

Receivers are selected to provide pumpdown capacity (with condenser coil) considering a nominal 100ft. equivalent line length and a matching evaporator. Receivers smaller than 6 inches are U.L. listed. All larger receivers are ASME stamped. Each receiver is equipped with inlet and outlet ball valves, gauge port, and pressure relief device. Oversize receivers are available with or without, optional low ambient condenser flooding valves.

Compressors

U.L. listed, semi-hermetic, energy efficient, Copeland™ compressors are applied throughout the line. Each compressor is equipped with reversible oil pump, suction and discharge service valves with gauge ports, inherent three phase overload protection, oil level sight glass,

crankcase heater, spring isolator mounting, in line discharge vibrasorber and auxiliary head cooling fan and/or oil cooler (where required.)

Controls

All condensing units are wired to operate on a standard pumpdown cycle. Run/ pumpdown switch is provided as standard.

All electrical control components are enclosed within a heavy-gauge weatherproof, hinged panel to provide maximum weather protection and enhance service analysis.

All units have individually numbered control conductors. Also standard are adjustable, refrigeration grade, separate high and low pressure switches (high-manual reset); oil pressure failure switch (manual reset) where applicable; and an individually numbered terminal strip for field connections. Conductors and fusing are selected per N.E.C. standards. A generously-sized enclosure is provided with adequate space to accommodate a complete defrost control system, either factory mounted and wired or field provided. Notably all Century control components are selected to be readily available through refrigeration wholesalers throughout the country. O.E.M. type controls are judiciously avoided.

1 - MCA (Minimum Circuit Ampacity) is calculated based on all concurrent loads applied to the circuit. (Largest load x 1.25 + 100% of all other loads including the control circuit.) Unit cooler amperages not included.

2 - Based on 80% full at 90°F ambient.

3 - Based on 100 ft. of equivalent refrigerant line piping. (Does not include the evaporator.)

4 - KW is for the unit.

5 - If single circuit option is selected for NDC models, some of the unit details listed above will change. Contact your local Century Representative for details.

6 - Rated in accordance with ANSI/AHRI Standard 520-2004.

7 - Operating weight reflects flooded refrigerant charge.

8 - Dual units are standard with dual electrical and refrigerant circuiting.

9 - Size based on mounted optional suction line trim.

“ - Consult your local Century Representative.

NOTE: Liquid line sizing and piping run must be sized not to exceed sub cooling design of 10°F for "M" and "H" models, and 5°F for "L" models. Failure to consider this may result in liquid line flashing and resultant poor system performance.

NOTE: Compressor amps are based on the maximum catalogued suction temperature for the condensing unit. Limiting the operation to this envelope is required via a MOP expansion valve or other means.

	0° F	-	-	-	-	-	-	47,106	10.69

1 - MCA (Minimum Circuit Ampacity) is calculated based on all concurrent loads applied to the circuit. (Largest load x 1.25 + 100% of all other loads including the control circuit.) Unit cooler amperages not included.

2 - Based on 80% full at 90°F ambient.

3 - Based on 100 ft. of equivalent refrigerant line piping. (Does not include the evaporator.)

4 - KW is for the unit.

5 - If single circuit option is selected for NDC models, some of the unit details listed above will change. Contact your local Century Representative for details.

NOTE: Liquid line sizing and piping run must be sized not to exceed sub cooling design of 10°F for "M" and "H" models, and 5°F for "L" models. Failure to consider this may result in liquid line flashing and resultant poor system performance.

NOTE: Compressor amps are based on the maximum catalogued suction temperature for the condensing unit. Limiting the operation to this envelope is required via a MOP expansion valve or other means.

6 - Rated in accordance with ANSI/AHRI Standard 520-2004.

7 - Operating weight reflects flooded refrigerant charge.

8 - Dual units are standard with dual electrical and refrigerant circuiting.

9 - Size based on mounted optional suction line trim.

" - Consult your local Century Representative.

1 - MCA (Minimum Circuit Ampacity) is calculated based on all concurrent loads applied to the circuit. (Largest load x 1.25 + 100% of all other loads including the control circuit.) Unit cooler amperages not included.

2 - Based on 80% full at 90°F ambient.

3 - Based on 100 ft. of equivalent refrigerant line piping. (Does not include the evaporator.)

4 - KW is for the unit.

5 - If single circuit option is selected for NDC models, some of the unit details listed above will change. Contact your local Century Representative for details.

6 - Rated in accordance with ANSI/AHRI Standard 520-2004.

7 - Operating weight reflects flooded refrigerant charge.

8 - Dual units are standard with dual electrical and refrigerant circuiting.

9 - Size based on mounted optional suction line trim.

" - Consult your local Century Representative.

NOTE: Liquid line sizing and piping run must be sized not to exceed sub cooling design of 10°F for "M" and "H" models, and 5°F for "L" models. Failure to consider this may result in liquid line flashing and resultant poor system performance.

NOTE: Compressor amps are based on the maximum catalogued suction temperature for the condensing unit. Limiting the operation to this envelope is required via a MOP expansion valve or other means.

NOTE: Liquid line sizing and piping run must be sized not to exceed sub cooling design of 10°F for "M" and "H" models, and 5°F for "L" models. Failure to consider this may result in liquid line flashing and resultant poor system performance.

NOTE: Compressor amps are based on the maximum catalogued suction temperature for the condensing unit. Limiting the operation to this envelope is required via a MOP expansion valve or other means.

1 - MCA (Minimum Circuit Ampacity) is calculated based on all concurrent loads applied to the circuit. (Largest load x 1.25 + 100% of all other loads including the control circuit.) Unit cooler amperages not included.

2 - Based on 80% full at 90°F ambient.

3 - Based on 100 ft. of equivalent refrigerant line piping. (Does not include the evaporator.)

4 - KW is for the unit.

5 - If single circuit option is selected for NDC models, some of the unit details listed above will change. Contact your local Century Representative for details.

6 - Rated in accordance with ANSI/AHRI Standard 520-2004.

7 - Operating weight reflects flooded refrigerant charge.

8 - Dual units are standard with dual electrical and refrigerant circuiting.

9 - Size based on mounted optional suction line trim.

“ - Consult your local Century Representative.

NOTE: Liquid line sizing and piping run must be sized not to exceed sub cooling design of 10°F for "M" and "H" models, and 5°F for "L" models. Failure to consider this may result in liquid line flashing and resultant poor system performance.

NOTE: Compressor amps are based on the maximum catalogued suction temperature for the condensing unit. Limiting the operation to this envelope is required via a MOP expansion valve or other means.

1 - MCA (Minimum Circuit Ampacity) is calculated based on all concurrent loads applied to the circuit. (Largest load x 1.25 + 100% of all other loads including the control circuit.) Unit cooler amperages not included.

2 - Based on 80% full at 90°F ambient.

3 - Based on 100 ft. of equivalent refrigerant line piping. (Does not include the evaporator.)

4 - KW is for the unit.

5 - If single circuit option is selected for NDC models, some of the unit details listed above will change. Contact your local Century Representative for details.

6 - Rated in accordance with ANSI/AHRI Standard 520-2004.

7 - Operating weight reflects flooded refrigerant charge.

8 - Dual units are standard with dual electrical and refrigerant circuiting.

9 - Size based on mounted optional suction line trim.

“-” - Consult your local Century Representative.

NOTE: Liquid line sizing and piping run must be sized not to exceed sub cooling design of 10°F for "M" and "H" models, and 5°F for "L" models. Failure to consider this may result in liquid line flashing and resultant poor system performance.

NOTE: Compressor amps are based on the maximum catalogued suction temperature for the condensing unit. Limiting the operation to this envelope is required via a MOP expansion valve or other means.

1 - MCA (Minimum Circuit Ampacity) is calculated based on all concurrent loads applied to the circuit. (Largest load x 1.25 + 100% of all other loads including the control circuit.) Unit cooler amperages not included.

2 - Based on 80% full at 90°F ambient.

3 - Based on 100 ft. of equivalent refrigerant line piping. (Does not include the evaporator.)

4 - KW is for the unit.

5 - If single circuit option is selected for NDC models, some of the unit details listed above will change. Contact your local Century Representative for details.

6 - Rated in accordance with ANSI/AHRI Standard 520-2004.

7 - Operating weight reflects flooded refrigerant charge.

8 - Dual units are standard with dual electrical and refrigerant circuiting.

9 - Size based on mounted optional suction line trim.

" - Consult your local Century Representative.

NOTE: Liquid line sizing and piping run must be sized not to exceed sub cooling design of 10°F for "M" and "H" models, and 5°F for "L" models. Failure to consider this may result in liquid line flashing and resultant poor system performance.

NOTE: Compressor amps are based on the maximum catalogued suction temperature for the condensing unit. Limiting the operation to this envelope is required via a MOP expansion valve or other means.

1 - MCA (Minimum Circuit Ampacity) is calculated based on all concurrent loads applied to the circuit. (Largest load x 1.25 + 100% of all other loads including the control circuit.) Unit cooler amperages not included.

2 - Based on 80% full at 90°F ambient.

3 - Based on 100 ft. of equivalent refrigerant line piping. (Does not include the evaporator.)

4 - KW is for the unit.

5 - If single circuit option is selected for NDC models, some of the unit details listed above will change. Contact your local Century Representative for details.

6 - Rated in accordance with ANSI/AHRI Standard 520-2004.

7 - Operating weight reflects flooded refrigerant charge.

8 - Dual units are standard with dual electrical and refrigerant circuiting.

9 - Size based on mounted optional suction line trim.

" - Consult your local Century Representative.

NOTE: Liquid line sizing and piping run must be sized not to exceed sub cooling design of 10°F for "M" and "H" models, and 5°F for "L" models. Failure to consider this may result in liquid line flashing and resultant poor system performance.

NOTE: Compressor amps are based on the maximum catalogued suction temperature for the condensing unit. Limiting the operation to this envelope is required via a MOP expansion valve or other means.

1 - MCA (Minimum Circuit Ampacity) is calculated based on all concurrent loads applied to the circuit. (Largest load x 1.25 + 100% of all other loads including the control circuit.) Unit cooler amperages not included.

2 - Based on 80% full at 90°F ambient.

3 - Based on 100 ft. of equivalent refrigerant line piping. (Does not include the evaporator.)

4 - KW is for the unit.

5 - If single circuit option is selected for NDC models, some of the unit details listed above will change. Contact your local Century Representative for details.

6 - Rated in accordance with ANSI/AHRI Standard 520-2004.

7 - Operating weight reflects flooded refrigerant charge.

8 - Dual units are standard with dual electrical and refrigerant circuiting.

9 - Size based on mounted optional suction line trim.

“-” - Consult your local Century Representative.

NOTE: Liquid line sizing and piping run must be sized not to exceed sub cooling design of 10°F for "M" and "H" models, and 5°F for "L" models. Failure to consider this may result in liquid line flashing and resultant poor system performance.

NOTE: Compressor amps are based on the maximum catalogued suction temperature for the condensing unit. Limiting the operation to this envelope is required via a MOP expansion valve or other means.

1 - MCA (Minimum Circuit Ampacity) is calculated based on all concurrent loads applied to the circuit. (Largest load x 1.25 + 100% of all other loads including the control circuit.) Unit cooler amperages not included.

2 - Based on 80% full at 90°F ambient.

3 - Based on 100 ft. of equivalent refrigerant line piping. (Does not include the evaporator.)

4 - KW is for the unit.

5 - If single circuit option is selected for NDC models, some of the unit details listed above will change. Contact your local Century Representative for details.

6 - Rated in accordance with ANSI/AHRI Standard 520-2004.

7 - Operating weight reflects flooded refrigerant charge.

8 - Dual units are standard with dual electrical and refrigerant circuiting.

9 - Size based on mounted optional suction line trim.

“ - Consult your local Century Representative.

NOTE: Liquid line sizing and piping run must be sized not to exceed sub cooling design of 10°F for "M" and "H" models, and 5°F for "L" models. Failure to consider this may result in liquid line flashing and resultant poor system performance.

NOTE: Compressor amps are based on the maximum catalogued suction temperature for the condensing unit. Limiting the operation to this envelope is required via a MOP expansion valve or other means.

1 - MCA (Minimum Circuit Ampacity) is calculated based on all concurrent loads applied to the circuit. (Largest load x 1.25 + 100% of all other loads including the control circuit.) Unit cooler amperages not included.

2 - Based on 80% full at 90°F ambient.

3 - Based on 100 ft. of equivalent refrigerant line piping. (Does not include the evaporator.)

4 - KW is for the unit.

5 - If single circuit option is selected for NDC models, some of the unit details listed above will change. Contact your local Century Representative for details.

6 - Rated in accordance with ANSI/AHRI Standard 520-2004.

7 - Operating weight reflects flooded refrigerant charge.

8 - Dual units are standard with dual electrical and refrigerant circuiting.

9 - Size based on mounted optional suction line trim.

" - Consult your local Century Representative.

NOTE: Liquid line sizing and piping run must be sized not to exceed sub cooling design of 10°F for "M" and "H" models, and 5°F for "L" models. Failure to consider this may result in liquid line flashing and resultant poor system performance.

NOTE: Compressor amps are based on the maximum catalogued suction temperature for the condensing unit. Limiting the operation to this envelope is required via a MOP expansion valve or other means.

- 1 - MCA (Minimum Circuit Ampacity) is calculated based on all concurrent loads applied to the circuit. (Largest load x 1.25 + 100% of all other loads including the control circuit.) Unit cooler amperages not included.
 2 - Based on 80% full at 90°F ambient.
 3 - Based on 100 ft. of equivalent refrigerant line piping. (Does not include the evaporator.)
 4 - KW is for the unit.
 5 - If single circuit option is selected for NDC models, some of the unit details listed above will change. Contact your local Century Representative for details.

6 - Rated in accordance with ANSI/AHRI Standard 520-2004.

7 - Operating weight reflects flooded refrigerant charge.

8 - Dual units are standard with dual electrical and refrigerant circuiting.

9 - Size based on mounted optional suction line trim.

“ - Consult your local Century Representative.

NOTE: Liquid line sizing and piping run must be sized not to exceed sub cooling design of 10°F for "M" and "H" models, and 5°F for "L" models. Failure to consider this may result in liquid line flashing and resultant poor system performance.

NOTE: Compressor amps are based on the maximum catalogued suction temperature for the condensing unit. Limiting the operation to this envelope is required via a MOP expansion valve or other means.

6 - Rated in accordance with ANSI/AHRI Standard 520-2004.

7 - Operating weight reflects flooded refrigerant charge.

8 - Dual units are standard with dual electrical and refrigerant circuiting.

9 - Size based on mounted optional suction line trim.

“-” - Consult your local Century Representative.

NOTE: Liquid line sizing and piping run must be sized not to exceed sub cooling design of 10°F for "M" and "H" models, and 5°F for "L" models. Failure to consider this may result in liquid line flashing and resultant poor system performance.

NOTE: Compressor amps are based on the maximum catalogued suction temperature for the condensing unit. Limiting the operation to this envelope is required via a MOP expansion valve or other means.

Product Benefits:

Adaptability

Century systems go where others can't. Your Century system is engineered to meet your specific project application and job requirements in-house with no need for modification in the field. With Century's extensive inventory of components, your order can be shipped when you need it.

Durability

Your Century system will be built with heavy gauge construction and the highest quality components to optimize efficiency for the life expectancy of your system. Century systems are engineered for Time Tested Toughness.

Serviceability

Your Century system will have easily accessible components and appropriate fin spacing to allow for easy maintenance. Century systems are engineered to be serviceable with a minimal amount of OEM components. A large inventory of replacement parts ensures professional, reliable service throughout the lifetime of your Century system.

Reduced Total Cost of Ownership

The adaptability, durability, and serviceability of your Century system results in reduced installation costs, maintenance costs, and utility costs throughout the lifetime of your system. Century systems are designed for customers requiring long-term, dependable systems.

The current refrigeration market...

Commercial Refrigeration

- Shipped from stock
- No modifications available; one size fits all equipment
- Lightweight construction
- Convenience store and restaurant applications
- Options/kits shipped loose for field assembly installation
- Cheaper, lower quality materials

Industrial Refrigeration

- Central refrigeration plant
- Dedicated mechanical rooms
- Stationary Engineer requirements
- PLC (Microprocessor) controls
- Steel construction
- Requires extensive piping in the field

now
presenting...

Comdustrial™ Refrigeration

Comdustrial™ Refrigeration Systems are the ideal balance of the commercial and industrial refrigeration markets.

- Industrial quality equipment in Commercial capacity ranges
- Built-to-order refrigeration systems with exceptional lead times
- Professionally represented by systems oriented Sales Representatives
- Systems based approach to your application
- Project specific submittal packages and drawings
- Quality materials for long-term equipment life

ABOUT RAE CORPORATION

RAE Corporation was founded in 1971 and is located in the MidAmerica Industrial Park in Pryor, Oklahoma. RAE employs more than 350 people, is represented throughout the country and markets equipment throughout the world. RAE manufactures air and water cooled condensing units, air and water cooled chillers, air cooled condensers, fluid coolers, heat transfer coils, industrial coils, unit coolers, corrosive environment equipment and an assortment of other engineered cooling systems, all of which are either UL- or ETL-approved. RAE has five divisions: Technical Systems, Refrigeration Systems, Century Refrigeration, RAE Coils and ZeroCool Systems.

4492 Hunt St. - Pryor, OK 74361 - (918) 825-7222 - Fax (800) 264-5329
