INTRODUCTION

Utility set

Dynamo centrifugal fans are SWSI, Class I, Arrangement 10 general purpose air moving devices. They are used for supply or exhaust applications in commercial, institutional, and industrial HVAC systems.

At the heart of the Dynamo is a computer designed, backward inclined, centrifugal wheel. This heavy duty non-overloading aluminum wheel (steel for heat & smoke removal) assures low noise and high efficiency performance.

The fan wheel, venturi inlet, housing, and frame are engineered to provide maximum performance and reliability.

Fan housings utilize heavy-gauge materials and employ welded construction. Motors and all drive components have been carefully engineered and tested for durability and performance. A wide range of accessories are available to meet various application requirements.

Dynamo centrifugal blowers are designed and built to provide the end user with a highly efficient and extremely reliable air moving unit. These units offer many features as standard equipment that other manufacturers consider options. Each Dynamo is fully assembled, factory set at the specified RPM, and test run prior to shipment.

Dynamo direct drive series

model: D

- Static pressure up to 2.9" wg.
- Direct drive - flow capacity up to 5,000 CFM

Dynamo belt drive series

model: D (B)

- Static pressure up to 6.8" wg.
- Belt drive - flow capacity up to 45,000 CFM

CERTIFICATIONS & LISTINGS

AMCA certification

PennBarry certifies that the Dynamo direct drive and belt drive models shown herein (excluding model D44) are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 (and AMCA Publication 311 if sound is also certified) and comply with the requirements of the AMCA Certified Ratings Program.

UL and cUL certification

Standard Dynamo fans carry the UL label, UL705 (ZACT/ZACT7), file #E28413.

Dynamo fans with "Fatrap" configuration carry the UL label, UL762 (YZHW/YZHW7), file #MH1068 (Belt Drive Only.)

Dynamo fans with the heat and smoke removal option carry the UL label, UL793 (ZAXH/ZAXH7), file #MH19473 (Belt Drive Only).

High Velocity Hurricane Zone (Hvhz)

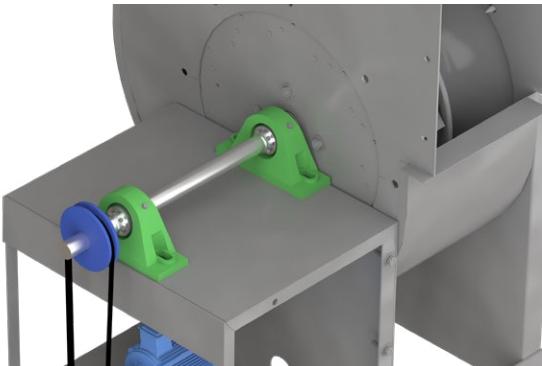

Miami-Dade NOA # 17-0112.09

Florida Product Approval #21559

FEATURES & BENEFITS

Self aligning pillow block bearings

Bearings are sized for a minimum L50 life exceeding 200,000 hours of operation. They require no maintenance other than periodic lubrication. Standard Zerk lube fittings allow for ease of lubrication. Extended lube lines are available as an option to facilitate lubrication when a weather cover is used.

Typical Drive, Shaft, and Bearings Assembly

Solid steel shafts

Sized to withstand a minimum of 125% of maximum catalogued operating speed, shafts are precision ground, polished, and treated for rust resistance.

Durable housings

Dynamo blowers are manufactured of heavy gauge zinc coated galvanized steel to insure a long, corrosion resistant life. Galvanized steel resists rust and will help maintain the unit's integrity even in environments such as coastal regions where salt air will rapidly deteriorate black iron, even when it is painted.

Versatile operation

All unit sizes are field rotatable to any of eight discharge positions. Both clockwise and counter-clockwise rotations are available.

Motors and drives

The motors and belt drives are pre-set at the factory to the specified RPM. These drives allow for system balancing in the field. All pulleys are sized for at least 150% of driven horsepower.

High quality, open drip proof motors are standard. Totally enclosed, explosion proof, and two speed motors are available.

Heavy duty support frame

The heavy duty support frame provides a strong structural foundation for the motor and drive assembly, as well as rigid reinforcement for housing members.

Standard gasketed access door

The standard gasketed access door enables easy maintenance of internal components.

Inlet angle flange

The inlet angle flange is standard to facilitate connection to the duct work.

Spark resistant aluminum wheels

Dynamo blowers use PennBarry's computer designed aluminum wheel. They are backward inclined and non-overloading, using heavy gauge aluminum to provide AMCA "C" spark resistant construction. AMCA "B" construction is available as a moderate cost option. This wheel design provides a high level of static efficiency while reducing start-up torque, thus extending drive component life. All wheels are statically and dynamically balanced for quieter operation.

Integral lifting lugs

All Dynamo units come standard with integral lifting lugs. These are built into the back support structure of the scroll housing and can be used with or without the weather cover installed.

Stiffener Angles

Heavy gauge angles, appropriately sized by unit, mean easy assembly mounting to support surface.

OPTIONS & ACCESSORIES

Dampers

Dampers can be installed at the discharge outlet to prevent backdrafts when fans are not in operation. Dampers can be used when outlet velocities do not exceed 4000 FPM for all discharge positions. Gravity dampers are not effective for use in top-angular-down, bottom-angular-down or down blast discharge positions.

Disconnect Safety Switches

Switches in housings are available to turn fans on and off for service only. Field wiring is required.

Drain connections

Drains are made of 2" pipe which is mechanically fastened and sealed to prevent leakage at the lowest point of the scroll. All fans can be supplied with drains except bottom horizontal discharge, where it is not required.

Extended lube lines

Preloaded at the factory, lube lines allow bearing maintenance when a weather cover is installed or when easy access to the bearings is unavailable.

Finishes

Coatings such as Polyester Powder Coat, Epoxy Powder Coat, Phenolic Epoxy Powder Coat, and others are available. See the coatings brochure for details.

Firestat

Firestat switch automatically disconnects the unit when the temperature of the air being exhausted exceeds a preset rating.

Stainless Steel Hardware

If another material is desired for the unit's hardware, stainless steel hardware is available for selection.

Stainless Steel Shaft

If another material is desired for the motor shaft, stainless steel shafts are available for selection.

Steel wheel (Heat & Smoke removal)

The wheel is a standard duty, all welded wheel (standard duty and high pressure belt drive). The blades are curved for improved air performance while increasing their strength and rigidity. The wheel assembly is fully welded to provide extremely durable and consistent performance. The wheel is dynamically balanced. Balancing weights are mechanically attached to the inside of the rims of both the back plate and wheel inlet. This allows a precise placement of the weights anywhere within a full 360° range on two separate planes, without the possibility of detachment.

Variable Frequency Drives

Variable frequency drives (VFDs) are designed to meet performance requirements while increasing efficiency. By varying the fan motor input frequency and voltage, the VFD controls the motor speed and torque, helping to improve productivity and lower energy consumption. The VSC and VSA are ideal for both new and retrofit fan applications. Shipped loose and separately.

Variable inlet vanes

Also known as vortex dampers, vanes provide efficient regulation of fan output over all operating ranges and substantially increases energy efficiency when full fan output is unnecessary. This accessory is suitable for inlet temperatures up to 200°F. (Not available for D10.)

Vibration isolators, hangers, and rails

These items are available in both rubber-in-shear and spring-type to mitigate residual vibration transmission. All isolators are properly sized to the unit. Floor flex pads are also available.

Spark-resistant construction

AMCA "C" is standard. AMCA "B" is available as an option. AMCA standards offer the following definitions and notes concerning spark-resistant construction:

- C The fan shall be so constructed that a shift in the impeller or shaft will not permit two ferrous parts of the fan to rub or strike.
- B The fan shall have a non-ferrous impeller and non-ferrous ring about the opening through which the shaft passes. Ferrous hubs, shafts and hardware are allowed provided construction is such that a shift in impeller or shaft will not permit two ferrous parts of the fan to rub or strike. Steps must also be taken to insure that the impeller, bearings and shaft are adequately attached and/or restrained to prevent a lateral or axial shift in these components.

Notes:

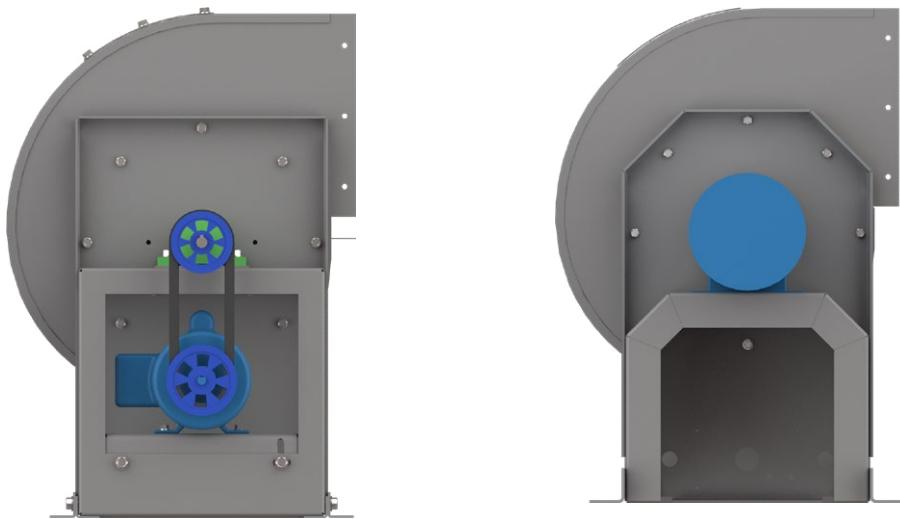

- 1 No bearings, drive components or electrical components shall be placed in the air or gas stream unless they are constructed or enclosed in such a manner that failure of that component cannot ignite the surrounding gas stream.
- 2 The user shall electrically ground on all fan parts.
- 3 For this standard, non-ferrous material shall be material with less than 5% iron or any other material with demonstrated ability to be spark-resistant.
- 4 The use of aluminum or aluminum alloys in the presence of steel which has been allowed to rust required special consideration. Research by the U.S. Bureau of Mines and others has shown that aluminum impellers rubbing on rusty steel may cause high-intensity sparking.

The use of the above standard in no way implies a guarantee of safety for any level of spark resistance. Spark-resistant construction does not protect against ignition of explosive gases caused by catastrophic failure or from any airstream material that may be present in a system.

Arrangement 4 or 10 single width, single inlet

Fans are constructed with the motor and bearings (if apply) out of the mainstream. For arrangement 10, motors are mounted inside of the pedestal on an adjustable motor plate. For arrangement 4, motors are mounted on top of a pedestal. Both arrangements allow for the use of a weather cover and can be used in ducted or non-ducted applications.

Dynamo fans are one component of a system. As such, fan performance is directly effected by that system. It is critical that system designers determine the actual system losses to ensure that the actual flow is as specified in the system design.

An extensive selection of accessory items to cover various application requirements is available at additional cost.

Inlet and outlet guards

Inlet and Outlet Guards provide safety in non-ducted installations. Guards are constructed of expanded steel in a removable frame attached to the fan housing. They are easily removed by maintenance personnel for cleaning or inspection.

Ventilated weather cover

The weather cover protects the shaft, bearings, motor and drive components from weather and other detrimental conditions. Galvanized steel covers are easily removed and reinstalled with thumb screws, requiring no tools. On larger sizes, the cover incorporates a removable end panel for easy access to drive components without removing the entire cover. Weather covers also act as drive guards to protect personnel and drive assemblies.

Flanges

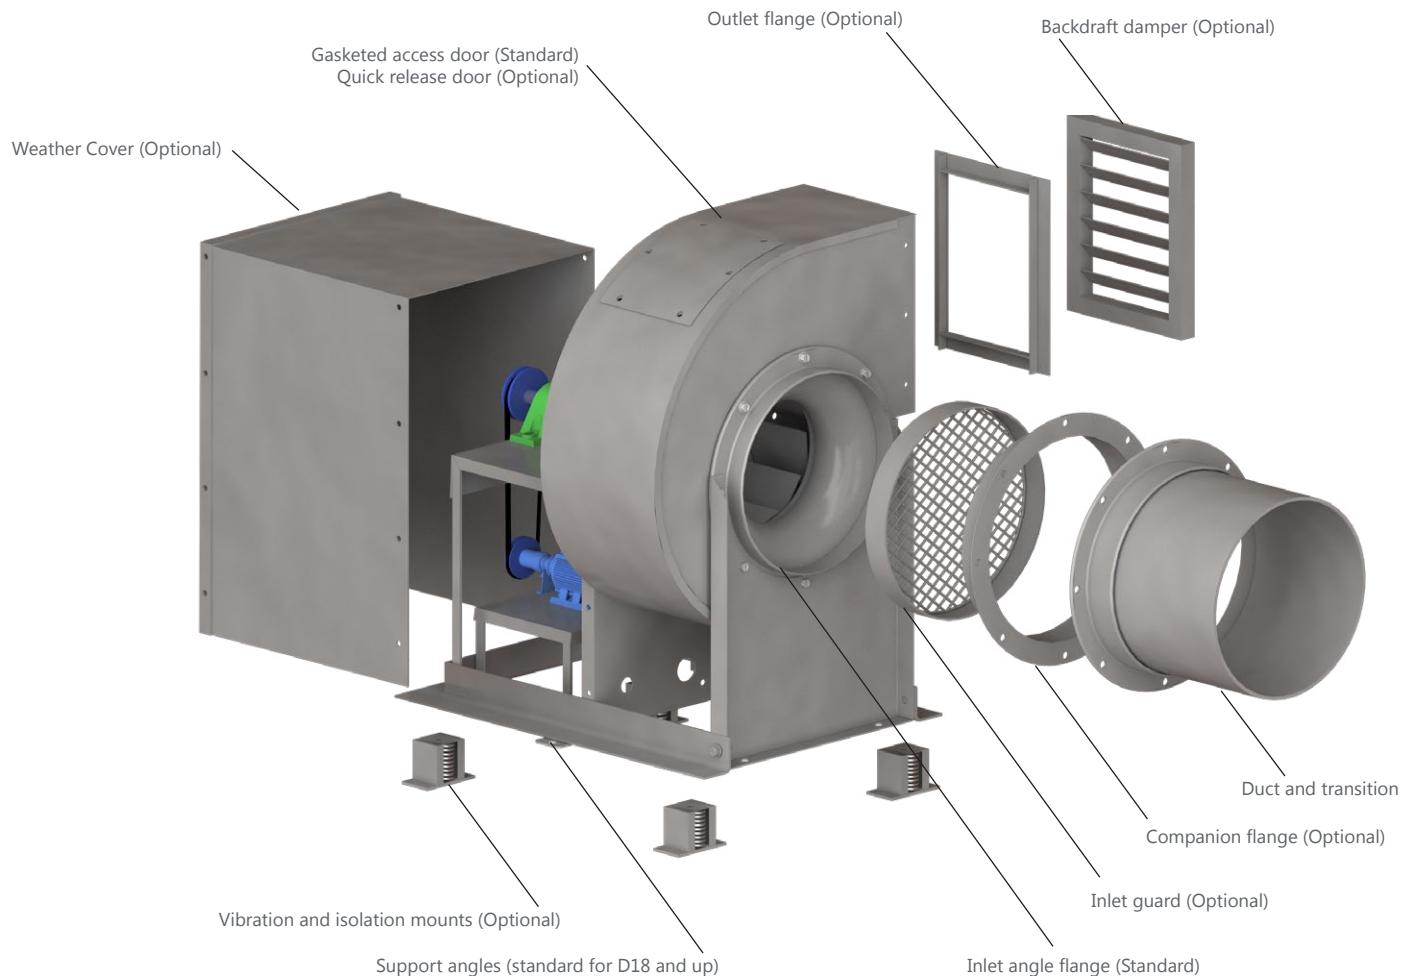

Outlet flanges facilitate the connection of duct work. Companion flanges are also available when the Dynamo is connected to duct work by a transition section. The companion flange fits the fan to the transition and guarantees proper sizing.

Access door

While a gasketed access door is standard, an optional quick release type door is available to allow for periodic inspection and cleaning.

High Wind Construction

High wind construction Dynamo fans are specifically designed for high velocity hurricane zones (HVHZ). The Dynamo models are designed to withstand 150 MPH winds in accordance with Miami-Dade and Florida Building Code standards. The units are 3rd party tested and certified through a 3rd party Professional Engineer (P.E.) to meet these strict standards. Installation details are provided and since there are no tie downs or external braces required for attaching the unit to the roof or curb this makes installation simple and easy. A wide range is offered to meet all of your ventilation needs.

DYNAMO HEAT & SMOKE CONFIGURATION - BELT DRIVE UNITS

UL power ventilator for smoke control

The Heat and Smoke (-HS) option provides a superior option for smoke control. The UL smoke control listing references UL705, UL793, Industrial Risk Insurers (IRI), and Southern Building Code Congress International (SBCI). The UL standard requires the fan to run at 500°F for 4 hours (IRI) and 1000°F for 15 minutes (SBCI). PennBarry Heat and Smoke Removal configured Dynamo units are listed at 500°F for 4 hours and 1000°F for 41 minutes. The additional 26 minutes at 1000°F will buy precious time in the event of a fire. The –HS option is available for all sizes of the Dynamo line.

DYNAMO FATRAP CONFIGURATION - BELT DRIVE UNITS

Dynamo fans can be specially configured for food service applications with the addition of a group of accessories that either meets a requirement or eases installation requirements according to NFPA 96. NFPA 96 "Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations" is the generally recognized authority nationwide for restaurant installation requirements. However, local codes may vary.

The special Dynamo configuration is called a "Fatrap." Fatrap configured fans are ideal for use in commercial kitchens over grills, charcoal broilers, deep fat fryers, steam tables, ranges, dishwashers, and other appliances.

UL 762 listing

Fatrap configured Dynamo fans are listed at 500°F, which is 200°F higher than UL requirements and is the highest in the industry.

Dynamo Dynapak fans consist of a standard up blast Dynamo unit attached to a fully welded inlet plenum and mounted on a curb cap. The resulting curb mounted assembly provides a unique solution to restaurant grease exhaust applications and is UL762 Listed. The Inlet plenum is equipped with a triple sealed removable access panel which allows cleaning of the fan and duct work without removal or hinging. This eliminates potential roof or fan damage caused by cleaning crews. All unwelded mating surfaces (to allow for service) are sealed with high temperature, UV rated silicone.

The high velocity discharge of the exhaust air stream helps to disperse contaminants away from the restaurant and minimize the cloud that sometimes forms as a result of high volume, intense cooking. The high static pressure capability of these heavy duty blowers (sometimes greater than 5" w.g.) makes them ideal for long, complicated duct runs or for use with specialized filtration equipment. An easily removable weather cover allows access to motors, belts, bearings, etc., for inspection or maintenance.

Dynapak units are available in sizes D10DPFT, D13DPFT, D16DPFT, D20DPFT & D24DPFT. For performance data refer to the corresponding Dynamo units shown on pages 14 through 22.

Grease collector / separator box

Designed for easy installation, the grease is routed from a single swiveling collection spout to an amply sized durable galvanized steel box, trapping grease and residue, and avoiding discharge onto the roof surface. Additionally, these boxes separate the water from the grease, prolonging the time required between periodic maintenance.

Ventilated curbs

NFPA 96 requires the use of ventilated mounting curbs to provide an approved arrangement for connecting a range hood and duct work to the roof fan for buildings two stories or higher. PennBarry's ventilated mounting curbs, 18" high, comply with that standard when properly installed. Ventilated curbs have a flat mounting flange for fastening directly to the roof deck. This flange should be securely fastened and flashed to ensure weather-tightness. Ventilated pedestals are designed to fit on an existing curb. They provide cap flashing when so installed.

Pre-wired junction box

A weather-proof junction box is factory wired and mounted to the housing exterior. An appropriately sized disconnect switch is commonly selected as an additional option. These items meet the code requirements for positive electric shut-off.

DYNAPAK & DYNAPAK FATRAP

Curb mounted utility set with integral inlet box

Dynapak

Includes all the features of the dynamo blower PLUS

Integral galvanized curb cap

- Eliminates need for costly customized field fabricated transition
- Comes with fully welded corners
- Equipped with pre-punched mounting holes

Fully welded inlet box

- Includes gasketed removable access cover with quick release latches
- Allows easy duct cleaning and inspection

Vented weather cover provided as standard

- Allows full access for normal maintenance

High temperature sealant provided

- Between scroll casing and side

High velocity discharge

- Throws contaminants further into the atmosphere
- Reduces possibility of contaminant collection on roof

Dynapak fatrap configuration

Dynapak Fatrap

Includes all the features of the dynamo blower PLUS

UL 762 Listing

- Rated at 500°F, highest in the industry

Pre-wired weatherproof junction box

Grease collector

- Separates the water from the grease
- Provides ample space
- Lengthens time required between cleaning
- Collects from a single swiveling collection spout

Integral galvanized curb cap

- Eliminates need for costly customized field fabricated transition
- Equipped with fully welded corners
- Pre-punched mounting holes

Curb mounted utility set with integral inlet box

Available for dynamo models

- D10DP, D13DP, D16DP, D20DP and D24DP

Typical applications

- Laboratory hoods
- Industrial process ventilation
- Dry cleaning

Dynapak fatrap configuration

Fully welded inlet box

- Includes gasketed removable access cover with quick release latches
- Allows easy duct cleaning and inspection

Vented weather cover provided as standard

- Allows full access for normal maintenance

High temperature sealant provided

- Between Scroll Casing and Sides

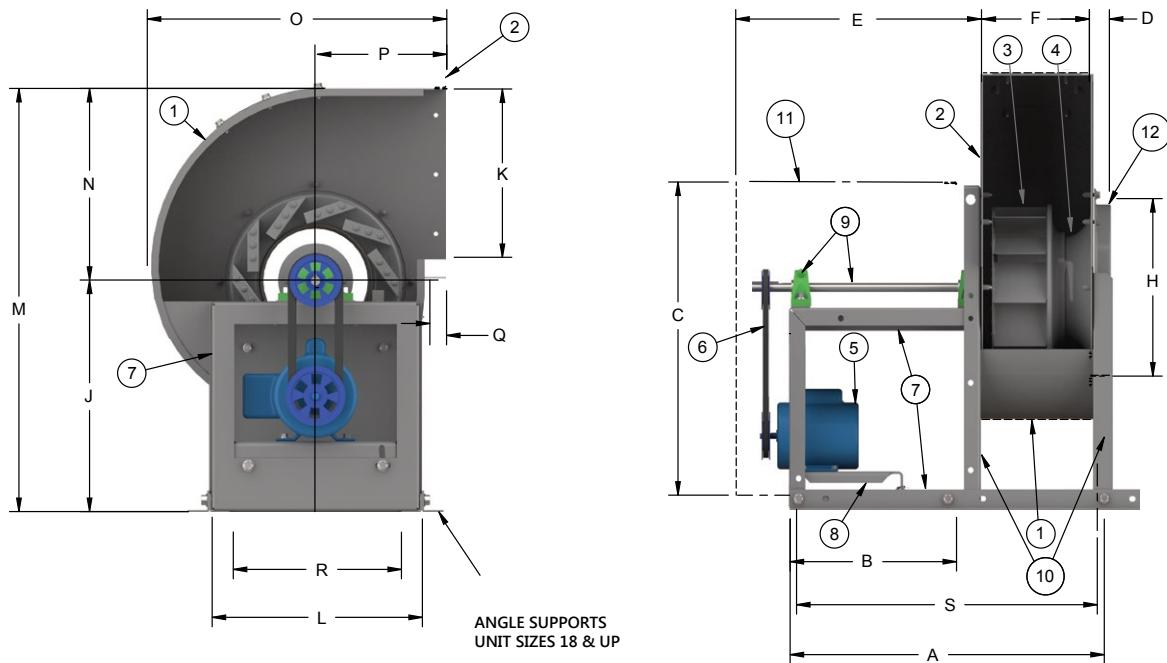

High velocity discharge

- Throws contaminants further into the atmosphere
- Reduces possibility of contaminant collection on roof

Available for dynamo models

- D10DPFT, D13DPFT, D16DPFT, D20DPFT and D24DPFT

GENERAL PURPOSE UTILITY FANS - BELT DRIVE OPTION

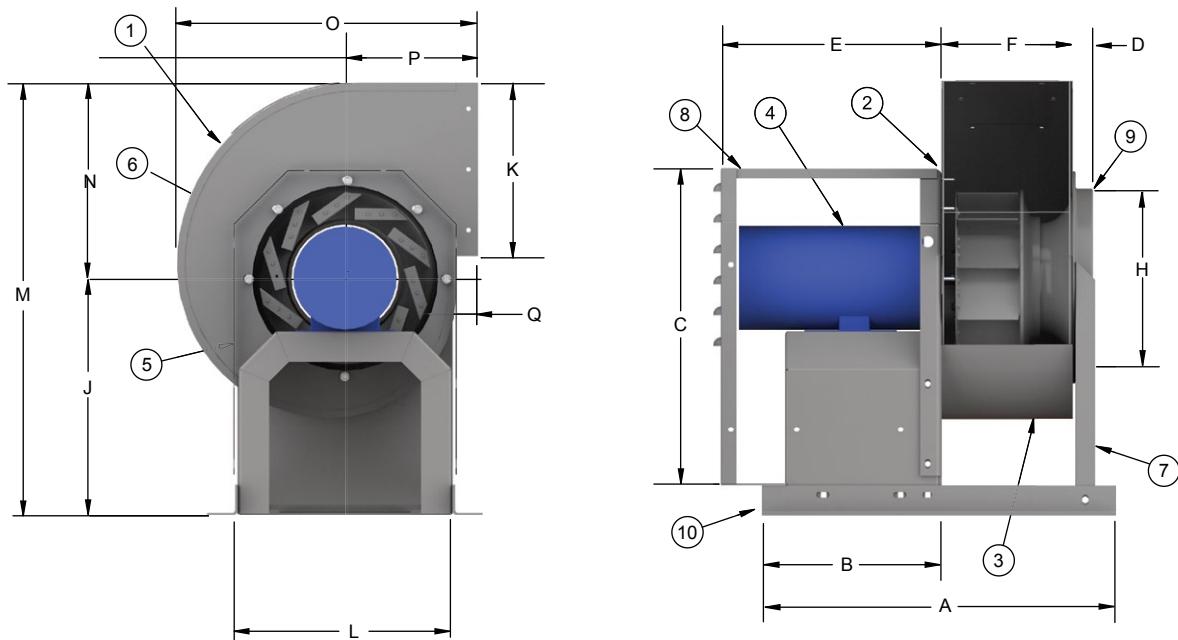

- 1 Blower scroll housing
- 2 Outlet duct flange (optional)
- 3 Centrifugal wheel (aluminum non-overloading)
- 4 Spun inlet with Cutoff (D16 and up)
- 5 Ball Bearing motor
- 6 Belt and pulleys (where required twin groove belts and pulleys will be provided)

- 7 Drive frame support assembly
- 8 Adjustable motor mounting plate
- 9 Fan shaft and bearings
- 10 Support legs with mounting holes
- 11 Belt and bearing enclosure (optional)
- 12 Inlet angle flange

Clockwise rotation - CW

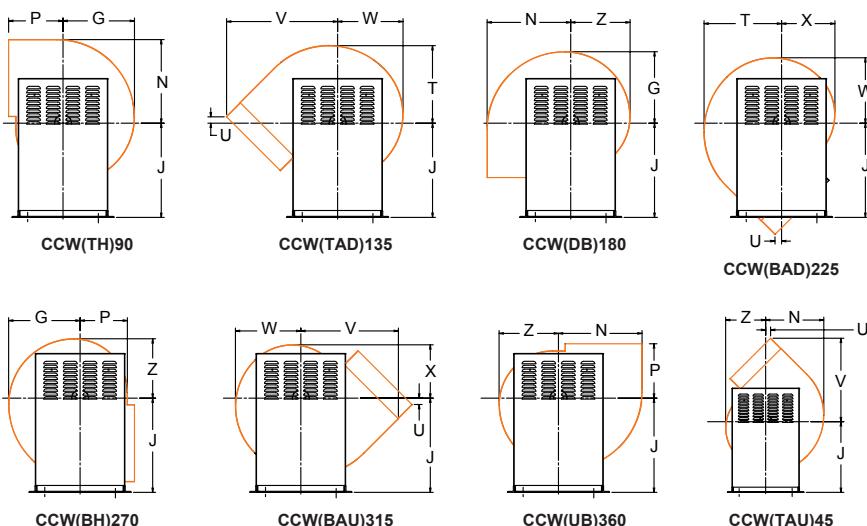

Rotational designations*

- TH - Top horizontal
- BH - Bottom horizontal
- TAD - Top angular down
- UB - Up blast
- DB - Down blast
- TAU - Top angular up
- BAD - Bottom angular down
- BAU - Bottom angular up

* Units will be supplied in the CW90(TH) position unless otherwise specified.

Counterclockwise rotation - CCW

Rotation & discharge dimensions

The direction of rotation is determined from the drive side of the fan. On single inlet fans, drive side is always considered as the side opposite the fan inlet. Direction of discharge is determined per diagrams shown. Angle of discharge is referred to the vertical axis of the fan and designated in degrees.

All dimensions in inches.

Unit Size	G	J	P	T	U	V	W	X	Z

DIRECT DRIVE MOTOR SELECTION

Green plus electronically commutated motor

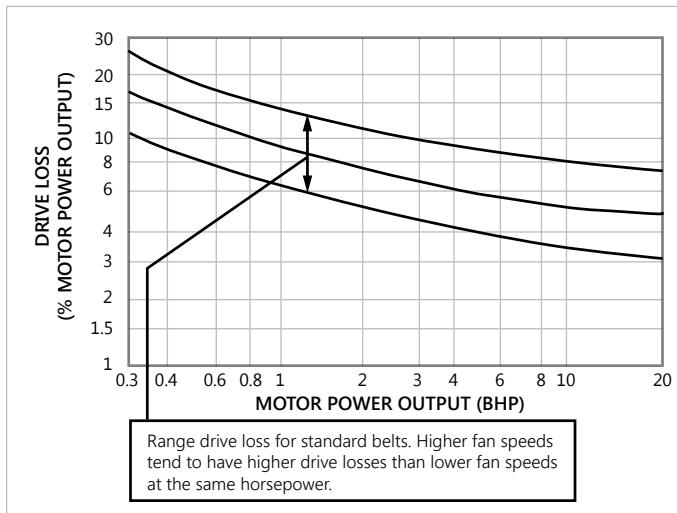

The Green Plus (GP) option utilizes EC motors to provide significantly greater efficiency, flexibility, and controllability over standard direct drive permanent split capacitor (PSC) motors. Using a potentiometer (optional), the Green Plus motors can be turned down to as low as 80% the max operating speed while maintaining 90% efficiency through the operating range. Additionally, the Green Plus can accept 0-10V input to tie to building management systems, allowing for savings in not only direct fan energy consumption but reducing the exhaust of conditioned air during off peak hours as well. All Dynamo Green Plus motors come for usage with 115V/208V-230V/460v, single phase or three phase, 50/60 Hz applications.

BELT DRIVE MOTOR SELECTION

Belt drive losses

The AMCA Review Committee has developed the chart shown below for the purpose of estimating belt drive losses. To calculate total BHP (including drive losses): Find the BHP of your operating point on the x axis on the graph below. Follow the vertical line to the curves indicating the range of drive losses. Look at the y-axis on the left and find the drive loss percentage. Calculate the total BHP by adding the drive loss to the operating point BHP. For BHP's below 0.3, use 30%.

For totally enclosed, explosion proof, multi-speed and all 1.0 Service Factor motors, fan BHP plus drive losses should not exceed motor rated HP.

Graph reprinted from AMCA publication 203, with the express written permission from the Air Movement and Control Association, Inc., 30 West University Drive, Arlington Heights, IL 60004-1983.

Single phase

The values of full-load currents, shown on the left, are for motors running at usual speeds and motors with normal torque characteristics. Motors built for especially low speeds or high torques may have higher full-load currents, and multi-speed motors will have full-load current varying with speed, in which case the nameplate current ratings shall be used.

The voltages listed are rated motor voltages. The currents listed shall be permitted for system voltage ranges of 110 to 120 and 230 to 240 volts.

The table data from the NEC 2005 edition, table 430-148.

HP	115V	208V	230V
1/6	4.4	2.4	2.2
1/4	5.8	3.2	2.9
1/3	7.2	4.0	3.6
1/2	9.8	5.4	4.9
3/4	13.8	7.6	6.9
1	16.0	8.8	8.0

Three phase

The values of full-load currents, shown on the left, are typical for motors running at speeds usual for belted motors and motors with normal torque characteristics. Motors built for low speeds (1200 RPM or less) or high torques may require more running current, and multi-speed motors will have full-load current varying with speed, in which case the nameplate current ratings shall be used.

The voltages listed are rated motor voltages. The currents listed shall be permitted for system voltage ranges of 230 to 240 and 440 to 480 volts.

The table data from the NEC 2005 edition, table 430-150.

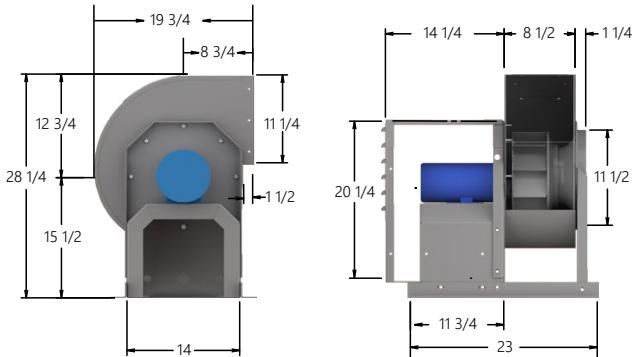

HP	208V	230V	460V
1/2	2.4	2.2	1.1
3/4	3.5	3.2	1.6
1	4.6	4.2	2.1
1 1/2	6.6	6.0	3.0
2	7.5	6.8	3.4
3	10.6	9.6	4.8
5	16.7	15.2	7.6
7 1/2	24.2	22	11
10	30.8	28	14
15	46.2	42	21
20	59.4	54	27
25	74.8	68	34

The amperages given here are approximate values only and represent averages compiled from the tables of leading motor manufacturers. Overload relay heaters should not be selected on the basis of these tables only. Heaters must be selected in accordance with the actual motor current as shown on the nameplate. It is also important that ambient temperatures of the area in which the motor control is located be taken into consideration when making heater selections. Ambient compensated overload relays are available for abnormal temperature conditions.

On most Belt Drive PennBarry roof exhausters, the motor synchronous speed is 1800 RPM.

BELT DRIVE SOUND POWER LEVELS, SONE RATINGS, & SOUND CLASSIFICATION GUIDE

Sound power levels

Since any mechanical device generates some sound energy into the air, fans will create some noise. Because of the great number of factors influencing sound output it is invalid to compare fans based on RPM, tip speed or outlet velocity. The only accurate basis of comparison is the sound power level generated by the fan at the required point of operation.

Having sound power levels for a specific fan at a specific operating point allows the system designer to determine the theoretical sound pressure level at any point in the occupied space. AMCA Publication 303 and the ASHRAE Guides provide more information on this process. Another typical application of sound power levels is to compare similar fans. Generally differences of 6 dB in the 63 Hz band and 3 dB in all other bands are considered insignificant.

System designers use many methods to predict acoustic acceptability of an occupied space.

The A weighted sound pressure level provides a single number that corresponds well to the human judgement of relative loudness. OSHA bases their requirements regarding exposure to noise on A weighted sound pressure levels. The disadvantage of this method is that A-weighted sound pressure levels do not provide information as to the quality of the sound. Noise Criteria (NC) curves are also widely used. To determine the NC level, the sound power spectrum is compared to defined limits. Other methods include RC curves, Sones, SIL and Noise Rating Curves.

Each method relies on sound pressure level information because the human ear "hears" sound pressure fluctuations, not sound power (watts). Sound pressure is a function of the attenuation of the space and the distance from the source. Consider a 100 watt light bulb. It provides adequate light for a closet, but not for a classroom, and in a stadium it would be imperceptible. While the light source was the same power (100 watts), the brightness level changed dramatically. Similarly, the same sound power level (acoustical energy) produces greatly different sound pressure levels (noise).

Sone ratings

PennBarry has provided sone ratings to allow designers to make an educated judgment as to the noise level a fan will develop in a space. Sone ratings are a loudness index developed from sound power level data. The calculation is at 5' from the fan inlet and in front of a reflecting plane (hard wall). Sones are weighted similarly to the A-weighting scale in that more weight is given to frequencies that people can hear "well" and less weight to frequencies that people do not hear "well". A significant feature of the sone scale is that it is linear rather than logarithmic. This means that 40 sones is 33% louder than 30 sones, as opposed to 40 dB being twice as loud as 30 dB.

Since the sone rating is determined from well defined assumptions and is linear in nature, it is ideal for comparing different fans moving air at the same CFM and SP. When using sones for this purpose, differences of 3 sones are considered negligible. The suggested loudness level chart below is a practical guideline for acceptable installed performance.

The sone values shown in this catalog are based on the sound power levels determined above, and calculated in accordance with AMCA Standard 301 "Methods for Calculating Fan Sound Ratings from Laboratory Test Data."

Sound classification guide

Suggested Loudness Level			Types of Areas
Area Sone Levels	Noise Criteria NC	dBA (1)	
Up to 9	32 to 54	35 to 60	Bingo Hall, Auction Room, Hotel Ballroom, Social Club, Reception Room, Apartment House, Professional Office, Supervisor Office, Courtroom, School and Classroom, Hospital Ward, Operating Room, Correction Facility. Moderately Quiet Sound
9.1 to 13	55 to 59	61 to 65	Lobby/Corridor, Spectator Area, Chicken House, Greenhouse, General Open Office, Restaurant, Night Club, Department Store, Ticket Sales Office, Casino, Spa, Control Room, Rail, Bus, Plane, Bowling Alley, Print Shop, Drafting Office, Convention Hall Average
13.1 to 18	60 to 64	66 to 70	Washroom & Toilet, Retail Shop, Bus Terminal Lounge, Foreman's Office, Cocktail Lounge, Office Hall & Corridor, Tabulation & Computation Office, Kitchen Cafeteria, Hotel Garage, Computer Room, Warehouse, Battery Charging Room Commercial
18.1 to 50	65 to 78	71 to 84	General Storage Area, Restaurant Banquet Room, Swimming Pool, Supermarket, Hotel Kitchen and Laundry, Welding Booth Department Store Main Floor, Paint Booth, Heat Treating Plant, Tool Maintenance Area High Sound
50.1 Plus	78.1 to 85+	84.1 to 90+ (2)	Manufacturing Area, Heavy Machine Foundry, Assembly Line, Machine Shops, Punch Press Shop, Light Machine Area, Boiler Room, Emergency Generator Room, Pump House, Power Plant, Transformer, Steel Mill, Engine Test Room, Compressor Room, Steel Stamping Ext. Heavy Industrial

1 dBA range of A-weighted sound levels, in decibels.

2 Sound levels this high are subject to OSHA Standards for safety, as well as state and local ordinances. Sound attenuation provisions should be considered.

Dynamo - belt drive units

Belt driven centrifugal exhaust or supply blowers shall be Dynamo, general purpose, belt driven utility fans with non-overloading, backwardly inclined aluminum wheels, as manufactured by PennBarry. Fans shall be single inlet, single width, AMCA arrangement 10 with clockwise (or CCW) rotation. Air discharge position shall be THD unless specified otherwise.

Fan housing shall be heavy gauge galvanized steel for maximum corrosion protection. Housings shall be field rotatable to any of eight 45° incremental air discharge positions. Fan scrolls shall be equipped with a bolted, gasketed (quick release if specified) access door for cleaning and inspection.

The bearing supports shall be constructed of welded structural steel members to prevent vibration and rigidly support the shaft and bearings, bearings shall be heavy duty, self-aligning, pillow block ball bearings, grease lubricated and selected for minimum life (L50) of 200,000 hours at maximum operating speed. Shafts shall be turned, ground, and polished. Shafts shall be sized so the first critical speed is at least 20% over the maximum operating speed. Close tolerances shall be maintained along the length of the shaft.

The standard fan wheel shall be aluminum (steel for smoke removal), non-overloading backward inclined type. The wheels shall be statically and dynamically balanced. The wheel and inlet shall be aerodynamically designed and constructed to provide maximum performance and efficiency.

Steel Wheel (Heat and Smoke Removal) - The wheel is a standard duty, all-welded wheel. The blades are curved for improved air performance, while increasing their strength and rigidity. The wheel assembly is fully welded to provide extremely durable and consistent performance. The wheel is dynamically balanced. Balancing weights are mechanically attached to the inside of the rims of both the backplate and wheel inlet. This allows a precise placement of the weights anywhere within a full 360° range on two separate planes, without the possibility of detachment

Pulleys shall be adjustable (through 20 HP) cast iron, machined, keyed, and securely attached. Belts and pulleys shall be sized for 150% of the installed motor horsepower. Motors shall be heavy duty, ball bearing, open drip proof (totally enclosed or other type if specified) motors. After assembly, the entire unit, with drive train installed and set to specified RPM, shall have a computerized vibration analysis performed. Vibration shall be measured in the horizontal, vertical, and axial directions at each bearing to assure quality and smooth operation.

Fans shall be licensed to bear the AMCA Air and Sound Certified Ratings Seal. Fan air performance ratings shall be bear on test conducted in an AMCA registered laboratory for AMCA 210 air performance testing. The test standard used shall be ANSI/AMCA Standard 210-85, ANSI/ASHRAE Standard 51-1985 "Laboratory Methods of Testing Fans for Rating." All sizes must be tested, calculations to other sizes not acceptable. Fan sound performance shall be based on tests conducted in an AMCA registered laboratory for AMCA 300 Sound Performance Testing. The test standard shall be 300 "Reverberant Room Method for Sound Testing of Fans." All sizes must be tested, calculations to other sizes are not acceptable, Air or Sound tests results are to be made available upon request.

Fans shall be UL (UL Std. 705, UL Std. 762 optional) listed. If specified (Fatrap option), fan shall additionally provide UL 762 Listing rated at 500°F, motor pre-wired to a weather-proof junction box, and drain connection leading into a grease collector/separator box. If specified (heat and smoke removal option), fan shall additionally provide UL power ventilator for smoke control systems listing rated for 500°F at 4-hours and 1000°F at 41 minutes, including a steel wheel.

Dynamo - direct drive units

Direct driven centrifugal exhaust or supply blowers shall be Dynamo, general purpose utility fans with non-overloading, backwardly inclined aluminum wheels, as manufactured by PennBarry. Fans shall be single inlet, single width, AMCA arrangement 10 with clockwise (or CCW) rotation. Air discharge position shall be THD unless specified otherwise.

Fan housing shall be heavy gauge galvanized steel for maximum corrosion protection. Housings shall be field rotatable to any of eight 45° incremental air discharge positions. Fan scrolls shall be equipped with a bolted, gasketed (quick release if specified) access door for cleaning and inspection.

The standard fan wheel shall be aluminum, non-overloading backward inclined type. The wheels shall be statically and dynamically balanced. The wheel and inlet shall be aerodynamically designed and constructed to provide maximum performance and efficiency. Motors shall be continuous duty, multi-speed, totally enclosed (or other type if specified) motors.

Fans shall be licensed to bear the AMCA Air and Sound Certified Ratings Seal and shall be UL (UL Std. 705) listed.

PENNBARRY PRODUCT SOLUTIONS

Commercial

- Roof & wall exhaust centrifugal fans
- Ceiling, wall, & inline centrifugal fans
- Roof supply centrifugal fans
- Square & round centrifugal fans
- Wall mounted axial fans
- Hooded roof axial fans
- Upblast roof axial fans
- Gravity ventilators
- Roof curbs

Industrial

- Freestanding centrifugal fans
- Industrial & material handling fans
- Tubular centrifugal inline fans
- Mixed flow centrifugal fans
- Plug & plenum fans
- Wall mounted propeller fans
- Tube axial fans
- Vane axial fans
- Bifurcator fans
- Lab exhaust

Kitchen ventilation

- Make-up air units
- Exhaust fans

Energy recovery

- Outdoor units
- Indoor units

PennBarry is proud to be your preferred manufacturer of commercial and industrial fans and blowers. Learn how PennBarry can assist you in your next application by contacting your PennBarry Representative or visiting us on the web at www.pennbarry.com
