

# MODEL VQ(L)

# ANSI B16.5 RTJ Slip-on Flanges - Class 150 or 300

#### **DESCRIPTION AND GENERAL PERFORMANCE SPECIFICATIONS**

The V-Cone® flowmeter is a patented, differential pressure type flow measurement device. A cone is positioned in the center of the pipe to increase the velocity of the flowing fluid and create a differential pressure. This pressure difference can be measured and used to accurately interpret flowrate. Two taps are provided on every V-Cone to allow sensing of the high and low pressures. A typical V-Cone application can follow these general performance specifications:

Accuracy: up to ±0.5% of rate
Repeatability: ±0.1%

• Turndown: 10:1

• Standard Betas: 0.45 through 0.85

Headloss: Percentage of differential pressure produced varies with beta ratio.

Installation: Typically 0-3 diameters upstream and 0-1 diameters downstream.

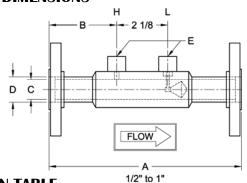

RTJ Slip-on Flanges 24509-38 Class 150 or 300

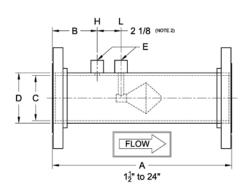

**Model VQ Bulletins** 

The V-Cone is manufactured under a quality management system that is certified to ISO 9001:2015.

\* Each V-Cone is sized for the intended application. Specific performance ratings must be obtained through the sizing process.

Technical questions can be answered through a local representative or through our application engineers.

#### MANUFACTURING STANDARDS

McCrometer's welders and welding procedures are qualified in accordance with ASME Section IX. All meters are visually inspected for weld defects. Specific customer requirements can be complied with upon request.

The welding can be in accordance with:

- ASME Section VIII
- ASME B31.1
- ASME B31.3

Non-destructive testing can include:

- Hydrostatic Pressure Testing
- Penetrant Examination
- Radiographic Examination
- Positive Material Inspection
- Magnetic Particle Examination
