[Advantages](#)

[Resources](#)

- Know your instrument is working correctly with instrument and sensor statuses that are shown
- Calibrate sensors and check sensor calibrations with guided and semi-automated calibration routines
- Monitor water quality data real-time or set up a log file for long term monitoring
- Access and create metadata that give system information, calibration history, user information, and site information
- Configure sonde, sensor, and communications settings
- Compatible with any recent version of a full Microsoft Windows Operating System on a laptop, desktop, or ruggedized device
