Sensor Maintenance

Proper electrode maintenance, storage and first use, ensures faster measurements, optimum accuracy and extend the lifetime of the electrode. There are some key signs that indicate when to clean or maintain your electrode such as slow stabilization times, erroneous or erratic readings, difficulty in calibrating electrode. Whether you are using a pH glass electrode, an ORP sensor or a DO probe, the Hach electrode maintenance reagents and guides help you maintain and keep your electrodes always clean while allowing you to keep a high level of confidence in your readings. Download the Hach electrode cleaning and maintenance documents for detailed information.
