

SDS PLUS CORE BITS

OVERVIEW

MILWAUKEE® SDS Plus Masonry Core Bits are ideal for drilling large holes in brick, block, and concrete with SDS Plus rotary hammers. Asymmetrical carbide teeth break up material more effectively, resulting in up to 20% faster drilling speeds. Centering bits allow for easy alignment of the hole and precise spot drilling. The versatile two-piece design allows users to drill with several different core bit sizes using one adapter. The spiral core body design minimizes friction in the hole and aids in dust removal during the application. Core bits cut with the outer edge only, therefore the operator must remove the inner core to continue drilling for holes deeper than 2".

FEATURES

- Asymmetrical Carbide Teeth for up to 20% faster drilling speeds
- Drilling large through holes in brick, block, and concrete

SDS PLUS SLEDGE™ SELF-SHARPENING CHISELS

OVERVIEW

Our SDS Plus SLEDGE™ Chisels stay sharper longer. Reinforced edges deliver maximum durability and reduced wear over the life of the chisel. We've engineered our chisels to maintain sharper edges for increased productivity and maximum life. No re-sharpening or re-hardening is necessary, reducing downtime. Our MILWAUKEE® SDS Plus SLEDGE™ Chisels are designed for SDS Plus rotary hammers with high grade forged steel for maximum durability and longer life in concrete demolition over our standard chisels.

STAYS SHARPER LONGER
