

Light Tower LED Option

Opt for better light quality and higher efficiency

**WACKER
NEUSON**

all it takes!

- Whiter light
- Immediate operation – no warmup time
- Longer lamp life
- Environmentally friendly

Energy efficient fixtures require less fuel so you can power more on site from a single machine

LED Technology

Available on all Wacker Neuson Light Towers

**WACKER
NEUSON**

all it takes!

Why buy a light tower with LED technology?

Cost savings: LED lights consume up to 45% less fuel than metal halides, saving money at the pump and refueling time.

Longer lamp life: LED lamps last up to five times longer than the metal halide lamps, reducing maintenance and replacement costs. Life expectancy: LED - 50,000 hours/Metal Halide - 10,000 hours.

Instant operation: LED lights can be turned on and off instantaneously, without time consuming warmup and shutdown. Metal halide lamps require a heat up period to fully illuminate.

Additional power: Less power required to run LED lights means more power available to run other equipment on a busy job site.

Whiter light: The light produced by LED fixtures provides more realistic illumination than metal halide lamps.

Environmentally friendly: Energy efficient alternative to standard metal halide lamps.

Compatibility: Choose LED lamps as a factory option or as a retro fit kit.

A bright idea!

4 LED fixtures

320 Watts

127,960 total lumen output
