FLOW-TEK SERIES M1 SEVERE SERVICE METAL SEATED BALL VALVES

THE HIGH PERFORMANCE COMPANY

HIGH PERFORMANCE SEVERE SERVICE Metal Seated Ball Valves

Flow-Tek's High Performance Series M1 Severe Service Metal Seated Ball Valves are suitable for the harshest applications. These products are customized as required for specific applications.

Each M1 valve is engineered for the customer's specific application and is backed by a specialized and trained service department.

Flow-Tek's technical engineers are industry leaders with exclusive metal seated ball valve experience. Since the early 1980's, Flow-Tek has successfully found solutions and created performance improvements for our customers. Our M1 valves have the very best improvements and features that will outperform other metal seated ball valves in the market. Flow-Tek is dedicated to continuous improvement and innovation in design and service to meet the customer's technical and commercial needs.

Flow-Tek's global sales, manufacturing and purchasing facilities allow us to produce the most technically advanced valves designed with the highest quality and workmanship at competitive pricing. Combined with our extensive service network, we are able to assist with any of your valve needs.

QUALITY, SAFETY AND PERFORMANCE

Flow-Tek's Severe Service Division provides high quality designs and manufacturing focusing on professional customer service. As a result of our continual commitment to quality, our facilities have achieved ISO 9001:2008 for the design and manufacture of severe service ball valves.

We recognize that the safety performance of our product is critical to our customers, therefore, all major part components are traceable to reassure our customers of consistent reliability throughout its life cycle. Our Severe Service products are certified to the requirements of Annex III, Module H of the PED 2014/68/EU.

At Flow-Tek we understand that safety correlates with our success and that good Health Safety Environment management equates to good business management. Safety is integrated into our foundation aspiring to prevent and eliminate all work related injuries to our employees and reducing harm to our environment.

INDUSTRIES SERVED

REFINING

HEAVY OIL UPGRADING & HYDROCRACKING

- Catalyst Addition & Withdrawal
- Pump Isolation
- Overhead Vapor Isolation & Control
- Low, Medium, & High Control Letdown Stations

DELAYED COKING

- Coke Drum Feed and Bypass Isolation
- Overhead Vapor Line
- Cutting Water Pump Isolation
- Steam Stripping, Quench Water and Drain Valves

REFORMING (CCR)

- Catalyst Lockhopper Isolation & Vent
- Regenerator Isolation
- Catalyst Addition/Withdrawal

POWER GENERATION

- Above & Below Seat Drains
- Ash Handling
- Attemperator/Desuperheater
 Spray Block
- Boiler Drains
- Boiler Feed Pump Isolation

- Continuous Boiler Blowdown
- Recirculation
- Feedwater Isolation
- Main Steam Stop
- Soot Blower

FLUIDIZED CATALYTIC CRACKING (FCC)

- Catalyst Handling
- Slurry Isolation & Control Steam
- Regeneration Dump
- Heavy Oil
- Flue Gas
- Cyclone
- Startup Vents/Drains
- Steam Dump
- Turbine Bypass Systems
- Turbine Drain

ð Bray

MINING

HIGH PRESSURE SLURRY TRANSPORTATION SYSTEMS

- Pump Discharge Isolation
- Pipeline Isolation Stations
- Instrument Isolation
- Vents & Drains
- Pigging Stations
- Choke Stations
- Concentrators

PRESSURE ACID LEACH & PRESSURE OXIDATION

- Acid Injection
- Feed Pump Isolation

• Blowback Vessel Isolation

- Oxygen Injection
- Steam Injection
- HP Water Injection
- Oxidized Slurry Isolation
- Slurry Drains & Vents
- Autoclave Isolation (Feed/Discharge)

CHEMICAL

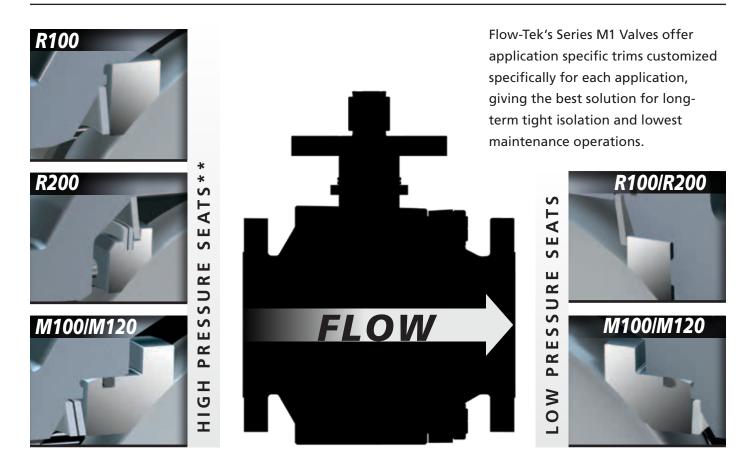

- Polyethylene
- Ethane Cracking
- DSIDA/Glyphosate
- PDH

SYNFUELS

- Coal Gasification
- Coal Liquefaction

- EDC/VCM Furnace
- Polypropylene
- Acetic Acid & PTA
- Polysilicon
- Molecular Sieve

APPLICATION SPECIFIC VALVE MODELS

| MODEL | SEAL UNI- | ING SY BI- | STEM *db&b | SEAT CHARACTERISTICS | MEDIA USE | APPLICABLE INDUSTRIES | |
|-------|--------------|---------------|---------------|--|--|---|--|
| R100 | • | | | Solids resistant design, low to high temperature | Light to Medium Catalyst Slurry, Saturated and Superheated Steam, General Hydrocarbons, Pressure Acid-Leaching and Pressure Oxidation Services over 450 °F (232 °C) | Refining Power Mining Chemical Synfuels | |
| R200 | • | | | Solids proof design, low to high temperature | Heavy Catalyst Slurry, Fouling Hydrocarbons, Coking | Refining Chemical | |
| M100 | • | • | | Solids resistant design, low temperature | Slurry Transport, Erosive and Abrasive. Pressure Acid-Leaching and Pressure Oxidation Services under 450 °F (232 °C) | • Mining | |
| M120 | • | • | • | Solids resistant design, double- block and bleed system, low temperature | Slurry Transport, Erosive and Abrasive | • Mining | |

*Double Block and Bleed **Exact configurations may vary for specific designs

SPECIFICATIONS

| Valve Design: | ASME B16.34 ASME Section VIII - Div 1, Appendix 2 | |
|----------------------|--|--|
| Sizes: | ¹ ⁄ ₂ - 36 in. (DN 15 - 900) Custom and larger sizes available upon request | |
| Pressure Ratings: | ASME 150 - 4500 Custom higher pressures upon request. | |
| Temperature: | Standard design rated up to 1100 °F (593 °C), can be customized for higher temperatures | |
| End Connections: | Raised Face and Ring Type Joint (ASME B16.5 and DIN 2501) Butt welds (ASME B16.25) Hubs Socket weld (ASME B16.11) Custom Ends available | |
| End-To-End: | ASME B16.10 (Long Pattern) | |
| Testing: | MSS SP-61, API 598, ANSI/FCI Class VI Custom Tests available | |

FEATURES & BENEFITS

1. BALL-TO-SEAT INTERFACE

Wide sealing surfaces lower dynamic contact stress betweentheballandseatduringoperationandextendthe valve's life cycle. These sliding surfaces utilize qualified hard coatings for specific applications.

• QUALIFIED PROPRIETARY COATINGS

Maximum sealing life achieved through widest sealing surfaces and advanced coating technology.

• SEALING SYSTEM

Series M1 valves feature trims that are designed to isolate flow direction (unidirectional) and/or reverse flow direction (bidirectional).

2. LOCKING SPRING (R100/R200)

A large spring washer stabilizes and locks the seat in place. These springs uniformly produce a consistent load around the entire seat ring and maintain a seal by loading the primary seat ring to the valve body.

3. LOAD SPRING

A large spring ring energizes the ball and seats at low pressures creating a tight low pressure seal and compensating for the thermal growth at elevated temperatures.

4. BLOWOUT-PROOF STEM

Featuring a highly corrosion resistant super alloy, blowout proof, one-piece design. The stem design meets API 608 & 6D.

5. INNER STEM BEARINGS

Two coated inner stem bearing rings are used as thrust bearings for rotational movement. Gall resistant coatings are used to maximize bearing life. These rings are flat-lapped for low friction operation.

6. ZERO EMISSION LIVE LOADED PACKING

Zero emission packing rings are used to reduce the carbon footprint of the M1 valve in conjunction with spring washers to compensate for packing consolidations at elevated temperatures and high pressure conditions.

NOTE: R100 trim shown.

11

12

7. OUTER STEM BUSHING

To eliminate side loading caused by valve cycling and/or valve orientation, this bushing ring maintains concentric alignment on the valve stem.

10

8. STEM BUSHING INSERT

Gall resistant materials to withstand high cycles.

9. MOUNTING FLANGE

A large, robust mounting flange is built into the valve body to support heavy operators, and is critical to the drive train sealing feature.

10. VALVE CONSTRUCTION

Series M1 valve bodies are offered in both forged and cast material grades to meet or exceed specifications. Available in two piece or three piece construction.

11. WALL THICKNESS

Series M1 valves are designed to have additional corrosion allowances that exceeds ASME B16.34 minimum standards to ensure the highest safeguards against corrosive and erosive service environments.

12. BODY JOINT

The bolted connection is designed to meet and exceed ASME Section VIII, Div 1, Appendix 2 criteria.

13

15

- Series M1 valves rated up to ASME 1500 utilize a large cross-sectional spiral wound gasket.
- Series M1 valves rated ASME 2500 and higher utilize our proprietary seal ring.

13. VALVE BORES

Bore sizes are based on ASME B16.34 Appendix A Table A-1. Custom or reduced bore sizes are available.

14. STEM KEYS

Keys are engaged in a 'closed' keyway slot to eliminate disengagement from the valve stem and are positioned in-line with ball bore (flow path).

15. END CONNECTIONS

Series M1 valves are available in raised face, ring joint, butt weld, socket weld, and hub-type configurations.
