

Be Right™

DR900 Colorimeter

Do you test numerous colorimetric parameters in harsh, demanding environments?

The DR900 portable colorimeter allows for quick and easy access to your most frequently used testing methods in less than four clicks. This colorimeter is waterproof, dustproof, shock resistant, and has been drop tested for greater quality assurance.

Which features are most valuable to you in a portable colorimeter?

This instrument comes with an intuitive user interface, large data storage, and a built-in USB port for the easy transfer of information. The portable colorimeter also helps satisfy core testing needs by offering at least 90 of the most common testing parameters.

Combining all these features with a push button backlit display for use in low light areas, you have a portable colorimeter which is field-ready and makes testing in harsh field environments a little less challenging.
