Custom Shower
Specification Guide

THE BOLD LOOK
OF **KOHLER**.

The Art of
Personalized Water Delivery

The perfect shower. It starts with one of life's basic and essential elements – H_2O. But where do you go from there? With KOHLER® performance showering faucetry, receptors, doors, steam, storage and seating, the options are virtually endless. If you can dream it ... we can make it a reality.

A KOHLER custom shower can transform water from a gentle rain to a profound downpour, or a tumbling waterfall to a relaxing mist. The water can come from above, the front and back, with virtually limitless combinations for an experience tailored to your exacting specifications.

And that's just the water part. Enjoy singing in the shower? Now you can sing with a full orchestra accompanying you. Today's KOHLER performance showers deliver a total sensory experience. So, go ahead. Immerse yourself. In hydro-rejuvenation. Music. Steam. Lighting. Even aromatherapy. All according to your needs and desires. With KOHLER, you'll have complete control over your showering environment and experience. And what an experience it will be!

This guide will take you through all the wonderful options and components available to you, in a simple, step-by-step format. Start with water. Add imagination. And let KOHLER do the rest.

Table of Contents

The Steps to a Perfect Shower

1. **Dream.** What's your idea of the perfect shower? Really think about it. Do you shower in the morning, evening, mid-afternoon? What's the purpose – relaxation, invigoration, or does it all depend on the kind of day you're having? How many people will be using the shower? Remember, each user has a unique set of preferences that you will want to consider. If you can dream it, Kohler can probably build it – across an incredibly accommodating range of budgets.

2. **Take some measurements.** Your Kohler design representative will need to know the space requirements, so measure the floor, walls and ceiling. Put it in a sketch or your house plans, if you can, showing the overall layout and where you might want the components. Will it be a corner installation or an alcove? What kind of enclosure and floor? Also, be sure to check the drain. A custom shower could require a 3-inch drain or a couple of 2-inch drains. Ask your Kohler design representative for a copy of our *Custom Shower Workbook* – perfect for taking notes and making sketches.

3. **Check your water heater and water pressure.** A ten-minute high-performance shower may use more water than a standard shower. So check your hot water heater specs and write them down. Your water pressure should be at least 45 psi, and you'll need ¾-inch supplies. KOHLER® custom showering components are compatible with well/pump systems, as long as they can provide sufficient water pressure. If you need help verifying your water pressure, please consult a licensed plumber or contractor.

4. **Weigh your options.** Start with the overall experience. Look at the DTV™ Custom Showering Experience, with its incredible combinations of water, sound, light and steam delivery. Peruse our custom configurations. Consider a steam shower. Then look at all the components – showerheads, bodysprays and don't forget the handshowers. Consider finish options, trim, doors, receptors and shower storage and seating. Kohler has everything you need to create the perfect shower – with all components fully coordinated, both in terms of design aesthetic and function.

5. **Get online.** Experience gracious living at KOHLER.com/customshowering.

6. **See your Kohler design representative.** Bring your sketches or your house plans, thoughts and dreams. He or she will answer all your questions, show you the products and systems, go through your options, offer suggestions and guide you on the right path to your perfect shower. Visit KOHLER.com to find your local representative.

THE BOLD LOOK
OF **KOHLER**®

The seamless integration of water, music, light and steam – all at the touch of a button.

DTV™ II is redefining the entire concept of a shower. Yes, it's water. But now imagine wrapping it in music, lighting, chromatherapy and a soothing blanket of steam. DTV II is a whole new level of performance – the total sensory experience, fully integrated, according to your ever-changing moods and wishes. The key is an advanced digital control platform that brings four media together – water, music, light and steam – into a single, seamless, fully programmable, absolutely personal showering environment.

You can choose from a number of water delivery options. You can cue your own music selections from your computer or MP3 player. You have a selection of light packages, including chromatherapy, designed to elevate the shower to unprecedented levels. You can incorporate rejuvenating steam – preset for temperature and duration – and aromatherapy options that can help you relax, or put you in another place altogether.

And, best of all, everything has been meticulously designed to be easily managed and operated, according to your needs and wishes, with an intuitive, digital interface that offers a menu of simple presets. No levers, no wall clutter, no manual adjustments, just one well-conceived, simple electronic control – and one incredible shower.

DTV™ II

Four elements – water, music, light and steam – wrapped into one seamless, multi-sensory showering experience. A digital media module brings it all into a single interface – with everything right at your fingertips. The six presets, with simple soft-touch actuation and clear on-screen navigation, enable you to easily create and save your showering preferences.

You'll want to first program the water – the incredible, spa-like DTV platform allows users to tailor the delivery of water according to their every last whim. Add your favorite music – from your own playlist – with a simple connection from your PC or Mac. Add your WaterTile® Ambient Rain™ showering panel* light palettes including sunrise, sunset, sunny clouds and water reflection, with colors that move and change over the course of your shower.
SoundTile™ speakers are water-resistant and match perfectly the shape, profile and finish of WaterTile bodysprays and showerheads. A fully integrated experience – right down to the hardware!

DTV

For those who prefer to concentrate on water, DTV lets you do it like no other shower in the world. It's truly the ultimate in hydrotherapy experience and personalization – from the angle of delivery to coverage and temperature. A true spa-like environment, developed with the assistance of body and wellness experts at Kohler Waters Spa, DTV features the same sleek design and intuitive controls as DTV II, including menu-based navigation and easy-to-use presets.

More Choices. Easier Installation.

Kohler has developed a custom shower system that has proved to be very effective in satisfying a range of customer needs. Below are six thoughtfully conceived configurations, each designed to simplify and accelerate specification and installation. Of course, we're more than happy to help you develop one-of-a-kind shower configurations as well, based on your space, your needs and your personal showering preferences. Kohler offers nearly unlimited options. And the DTV™ platform fits them all.

(a) DTV II media module K-638-K-NA
(b) DTV six-port thermostatic valve K-682-K-NA
(c) DTV II Auxiliary digital interface K-658
(d) DTV II Primary digital interface K-695

The Power Behind the Shower

Now that you are familiar with the digital interface of DTV™ and DTV II, and how simple it is to create a personalized shower that integrates water, music, lighting and even steam, you may be wondering just how it all works. Well, it actually begins behind your wall with our precision-engineered, best-in-class thermostatic valve that powers the entire system.

It takes power to drive a DTV custom shower, and this six-port valve really delivers. In fact, it is capable of operating as many as eight shower components.

It offers easy, plug-and-go, stud-pocketed installation too — a simple setup for a variety of shower configurations with the capacity to handle almost any custom configuration. For DTV II, the valve is paired with a media module that acts as a central hub for lighting, music and steam. This makes the integration of all these different media seamless for the user, allowing one to create complex programs with ease.

Valve Technology. Taken to a Higher Power.

A KOHLER® custom shower, with its network of products and sprays, provides a wonderful experience for a homeowner. And a very demanding experience for a valve. Fact is, it takes serious mechanics to drive a modern shower – to maintain consistent flow and temperature across multiple, synchronized showerheads, handshowers and bodysprays. KOHLER valves are more than up to the task. They deliver up to 17.2 gallons of water per minute, enough to support even the most complex showers, including his and hers configurations. They provide incredibly accurate temperature control and safety protection. And they're taking installation to whole new levels of ease, flexibility and confidence.

K-Joints* by Kohler

As important as performance is to today's shower, appearance is often what leaves the most lasting impression. Even the slightest imperfection in a valve rough-in can leave the homeowner staring at a shower with unusually tall, short or even crooked handles.

Enter the K-joint, Kohler's innovative solution to out-of-spec valve installations. The exclusive, patent-pending K-joint compensates for behind-the-wall variability, such as out-of-square and deep rough-in installations, without compromising the appearance of the trim.

Three sizes ... easy and convenient
All three K-joints are included with KOHLER® thermostatic, transfer and volume control trim and also are available as service parts: 1/2" K-1030840-BC**, 7/8" K-1031782-BC, 1 3/8" K-1032871-BC, 1 7/8" K-1032872-BC.

Normal Rough-In Installations
• Valve is square to finished wall
• Valve is at prescribed depth

Result
• Both with and without the K-joint – handle height and squareness as intended

Out-of-Square Installations
• Valve is not square to finished wall
• Valve is at prescribed depth

Result
• Standard installation without K-joint – handle likely to appear crooked against the wall
• With K-joint – handle height and squareness as intended

Deep Rough-In Installations
• Valve is square to finished wall
• Valve is deeper than prescribed

Result
• Standard installation without K-joint – handle height will likely be shorter than intended (deep rough-in kit may need to be purchased)
• With K-joint – handle height and squareness as intended

*K-joints are not available on 300-series or 400-series valves.

**Available if needed at KOHLER.com/serviceparts

MasterShower® XVII Thermostatic and Stacked Thermostatic Valves

A KOHLER® thermostatic mixing valve controls the temperature. A separate volume control valve manages the flow – a simple concept that gives the user total control over the shower environment. These thermostatic valves can run up to seven components at once using a ¾-inch pipe, and their innovative shuttle design delivers precise, consistent temperature control at the full range of flow rates. Both the thermostatic and stacked thermostatic valves have a 104°F factory-calibrated comfort setting for safety and a high-temperature limit stop for those who want a slightly higher temperature, up to a maximum of 120°F. The stacked thermostatic valve offers the same ease of control over temperature and volume, and the same safety features as the MasterShower XVII thermostatic valve, but because the valves are housed together, a clean, simple look is created in the shower enclosure. Everything is right there in one easy-to-use valve trim assembly.

K-669-KS

K-679-KS

K-670-KS
K-680-KS
Under Normal Conditions
- Hot and cold water are mixed to achieve the desired temperature
When Cold Water Pressure Drops
- Temperature of the water rises slightly
- Wax element is heated
- Resulting expansion of the wax moves the shuttle down
- Flow of water into the valve is reduced
- Temperature is quickly restored to a comfortable level
When Hot Water Pressure Drops
- Temperature of the water drops slightly
- Wax element is cooled
- Resulting contraction of the wax moves the shuttle up
- Flow of water into the valve is reduced
- Temperature is quickly restored to a comfortable level

HiFlow Rite-Temp®
Pressure-Balancing Valve

The HiFlow Rite-Temp (¾-inch) and Rite-Temp (½-inch) pressure-balancing valves do not require a volume control. One handle controls the flow and temperature. This valve maintains a consistent temperature, within a range of +/– 3ºF, and shuts off automatically if the cold water supply is interrupted. The adjustable high-temperature limit stop provides an extra level of safety.

*Actual flow rates may vary according to plumbing system setup.

**The Rite-Temp Diaphragm** is shown above as designed within the valve. Upon change of water pressure, the diaphragm will slide to the left or right and sustain the flow of incoming water.
When cold water pressure drops, diaphragm system adjusts to increase incoming cold water and decrease incoming hot water.
When hot water pressure drops, diaphragm system adjusts to increase incoming hot water and decrease incoming cold water.

MasterShower® XVII Thermostatic Valve⁺ Setup

A KOHLER® thermostatic mixing valve controls the temperature **(a)**. A separate volume control valve controls the flow **(b)**. A simple concept that gives the user total control over the shower environment. Set the temperature and it stays there, automatically adjusting to changes in pressure and incoming water temperature. These thermostatic valves deliver 17 gallons of water per minute, and their patented shuttle delivers precise, consistent temperature control at the full range of flow rates. KOHLER volume control valves allows the user to control the flow of each individual outlet (showerhead, handshower, bodysprays).

⁺A volume control valve is required to operate
the MasterShower XVII thermostatic valve.

MasterShower® XVII Stacked Thermostatic Valve or HiFlow Rite-Temp® Pressure-Balancing Valve Setup

This arrangement allows you to choose between a **(a)** MasterShower XVII stacked thermostatic valve or a HiFlow Rite-Temp pressure-balancing valve **(b)** to control both temperature and volume. The stacked thermostatic valve allows the user to set and maintain a desired temperature while controlling volume separately. For the Rite-Temp valve, one handle controls both the volume and the temperature. After choosing between these two valves, all you need is a 3-way transfer valve **(c)**. Used in conjunction with either the MasterShower XVII stacked thermostatic or the HiFlow Rite-Temp valve, the 3-way transfer valve allows you to put the water exactly where you want it. Just turn the handle and choose from six different outputs. You can combine showerheads with bodysprays or handshowers with fixed showerheads. The choice is yours.

A transfer valve is not required to operate a pressure-balancing or stacked thermostatic valve. It is recommended only for controlling outputs in multiple component showers employing those mixing valves.

KOHLER® Valve Trim & Finishes

KOHLER custom shower trim is available in a myriad of styles and colors that coordinate perfectly with KOHLER fixtures and faucets. Available on thermostatic valves, volume controls and transfer valves, the exclusive KOHLER K-joint is an extension that attaches to the valve stem and compensates for behind-the-wall rough-in variability without compromising the appearance of the trim. All trim features an extraordinary range of exclusive finishes that are both durable and beautiful, including Vibrant® PVD color finishes, as well as options for Polished or Brushed textures that can be carried throughout the entire shower environment. Exceeding industry standards two times over, our Vibrant PVD color finishes withstand daily use by resisting tarnish, corrosion and scratches, to ensure a lifetime of dependability.

Your KOHLER Steam Configuration.

Kohler offers a full line of steam components that provides the features you need to create a personal steam environment in your home. Enveloped in luxuriously moist heat, your mind and body are free to relax while muscle aches, tension, stress and congestion disappear.

KOHLER® steam generators can be installed easily in new shower enclosures, including modules, receptors with tiled walls and completely customized showering spaces. Innovative KOHLER steam generators, available with Fast-Response™ and automatic Power Clean™ technologies, take the steam experience to a whole new level. The Fast-Response model delivers a soothing experience that begins in one minute. The Power Clean option provides hands-off, automatic cleaning to ensure proper, safe maintenance of the steam generator.

Steam Components

To incorporate steam in your shower, a control kit consisting of a control and steamhead are required. If using DTV™II, an adapter kit and steam generator are required.

K-1647-PC
Includes Control

K-1647-PC
Includes Steam head

K-1708 7-kW Fast Response
steam generator.

The easy-to-operate steam control regulates time and temperature to help you create the steam experience you desire. Select your preferences—between 90ºF and 125ºF and up to 20 minutes in duration—to customize your experience. Recommended placement is 4"–6" above the shower floor.

The state-of-the-art thermostatic steam head opens and disperses steam in an even pattern to prevent hot spots. An integral aromatherapy well allows you to add a relaxing scent to the environment. The steam head retracts when steam is not in use.

Available in KOHLER line matched finishes.

KOHLER steam generators are available in a range of sizes to suit your specifications. The upgrade options, Fast-Response™ steam generator and the automatic cleaning technology of Power Clean™, offer added convenience to optimize your steam experience.

For added convenience, flexibility and optimal performance, install steam generator within 25 feet of the shower.

Step 1: Personalize your steam environment.

To create a steam environment that suits your experiential needs, simply calculate the cubic footage of the shower enclosure (length x width x height) and select the appropriate steam generator size with the preferred options. In 60 seconds, Fast-Response™ 5- to 30-kW UL Listed steam generators deliver a luxurious steam experience in larger home showering spaces, while standard 5- to 11-kW models offer robust steam for most shower sizes.

Maximum Volume Rating*** (L x W x H)	Power Rating	Fast-Response** Steam Generator Model	Control Kit Required	Standard Steam Generator Model	Control Kit Required

The WaterTile® Family of Custom Shower Products
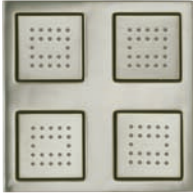

The WaterTile offering includes a full range of custom showering components including WaterTile and WaterTile Round bodysprays, WaterTile showerheads, the WaterTile Rain showering panel, SoundTile$_{TM}$ speakers and the WaterTile Ambient Rain$_{TM}$ showering panel. Each piece delivers a sophisticated, low-profile appeal and is available in an array of beautiful KOHLER finishes.

WaterTile and WaterTile Round bodysprays and WaterTile showerheads, as well as the WaterTile Rain showering panel with four individually adjustable WaterTile units, deliver an unsurpassed level of hydrotherapy. WaterTile Ambient Rain delivers full-body water coverage while also allowing the user to incorporate transforming colors and themes from passing clouds and sunsets to flowing water, adding a whole new dimension to the showering experience.

SoundTile speakers, engineered in close cooperation with Polk Audio, personalize things and create a unified, sophisticated aesthetic. These water-resistant speakers are designed to connect seamlessly with the DTV$_{TM}$ II media module or any home audio system, allowing you to link directly to your MP3 player or PC and listen to your own playlists. And they sound ... Amazing!

Performance Showerheads

Think about the different types of rain you've experienced in your life. Kohler certainly has. And we've created an extraordinary collection of performance showerheads that is capable of providing a range of experiences from a gentle mist to a virtual deluge. Enjoy walking in those full, drenching summer downpours? You'll want a KOHLER® single-function showerhead. With its large, 72-nozzle sprayface and "racetrack" waterway, it delivers a consistent and dependable spray. Our multifunction showerheads feature an easy-grip adjustment ring that offers an aerated, wide-coverage or massage spray to match your changing moods and needs, from revitalization to relaxation. For those interested in conserving water, consider Purist® and Fortè® eco-friendly showerheads. Their 1.75 gpm flow rate offer a 30% water savings over traditional 2.5 gpm showerheads. KOHLER performance showerheads are available in a wide variety of styles and finishes that coordinate with other KOHLER products.

Adjustable Handshowers & Coordinating Accessories

You haven't experienced this many angles since geometry class. KOHLER® performance handshowers adjust to virtually any position, giving you total command of the shower. Their articulating heads let you choose just the right angle for the spray, so that you can wash, rinse or massage. You can even use it to clean the shower enclosure.

To increase the functionality of your showering environment, while reinforcing the aesthetic of your KOHLER performance showering faucetry, KOHLER accessories offer a wide variety of line-complementing products for complete design solutions.

For those interested in conserving water, consider Purist® and Forté® eco-friendly handshowers. Their 1.75 gpm flow rate offers a 30% water savings over traditional 2.5 gpm handshowers.

KOHLER® Rain Showerheads

The new Rain showerheads offer a thick, indulgent spray that soaks you thoroughly and completely. It's gravity, working to create a big, beautiful, relaxing soak that only nature could deliver ... until now. Water pressure fills the large 8-inch showerhead, and gravity empties it, slowly and luxuriously, directly above you. Rain showerheads are crafted from solid brass in either contemporary or traditional styles. Both come with the MasterClean™ sprayface for easy cleaning and with a choice of two mounting systems – directly to the ceiling or with a 90º showerarm.

Shower Receptors

Think tile is the only option you have for creating a sophisticated shower floor? Think again. A KOHLER shower receptor is the flexible, seamless, one-piece solution. KOHLER receptors are available in a wide range of styles, sizes, colors, textures and materials, giving you tremendous freedom to create and explore, while staying within the context of your overall shower aesthetic. Plus, they have none of the complications of tile – no messy grout lines to clean or time-consuming installation hassles, and their one-piece construction is dependably leak-resistant. KOHLER shower receptors come in a variety of materials. KOHLER Cast Iron shower receptors feature a thick layer of enamel that resists staining, scratching and chipping, and offer a gorgeous, high-gloss finish. Or choose a beautiful acrylic or fiberglass receptor to accommodate your functional and aesthetic preferences.

Shower Lockers, Seating & Hand Rails

Far too often storage, seating and support solutions for the shower are afterthoughts. As a result, many homeowners resort to makeshift solutions that are unsightly, inefficient and uncomfortable. At Kohler, storage and seating are a fundamental part of the conversation. And they're always fully integrated — aesthetically, functionally and ergonomically.

Our storage systems come in a range of styles, colors and configurations. Constructed of aluminum or acrylic, their dimensions go up to 60-inches tall and 15-inches wide. You have a choice of fixed or removable shelves, some with cutouts for razors, brushes and other items. Each option is recessed and flush-mounted to fully complement your showering environment without intruding on the space. Add a coordinated, built-in acrylic KOHLER seat and your shower will be relaxing, comfortable and sophisticated — just the way you want it.

Offering concealed installation, KOHLER Belay hand rails blend in with tiled showering environments, providing functionality while upholding the visual allure of the tile. Their aluminum construction, offered in five gorgeous finishes, coordinates with KOHLER faucetry and shower door hardware and trim. A water-drainage channel eliminates water from pooling within the hand rail. Additionally, KOHLER hand rails can be installed at various heights.

KOHLER®
Shower Doors

At Kohler, we believe a shower door should do more than simply open and close. We design our doors to both complement and enhance the environment, and never to overwhelm an aesthetic.

Kohler offers a wide choice of styles, shapes and sizes, all impeccably designed to coordinate with your overall design strategy. Choose from sliding, hinged or compact doors to those offering greater accessibility. There are unique, foldable glass curtains and heavy glass pivoting doors inspired by some of today's more state-of-the-art spas. You have an extraordinary range of design and structural ideas to consider, from traditional to sleek European treatments. So whether you're trying to accommodate open spaces, compact environments or even a frameless aesthetic, Kohler has the shower door for you.

CleanCoat™

Cleans Easily
Wipes Clear
Hecho Sólido
Para Espalda

All Kohler shower doors feature CleanCoat™ technology, a protective layer that repels water and residue away from the glass. This innovative coating makes cleaning easy and keeps the shower door beautiful.
