

Data-Driven FOG Program Management

Designed to scale as your program grows, with unparalleled flexibility to adapt as business models shift and regulatory pressure tightens.

FOG Software makes managing Fats, Oils, and Grease data-driven and defensible by helping you eliminate FOG problems and maintain the health of your sewer system.

- ✓ Streamline and automate cumbersome tasks with a simple, modern, browser-based solution.
- ✓ Track inspection schedules, define frequencies, and use powerful custom forms for facility-specific needs to prioritize and perform inspections.
- ✓ Simplify compliance management with a complete timeline of communications, maintenance, and inspection history.
- ✓ Easily maintain the inventory and history of facilities, contacts, equipment, and activities in an organized and searchable interface.

“Since deploying the FOG management software we have been able to increase the number of our inspections by 316% over 4 years. The new program has improved work processes, like route planning and reduced admin time by bringing everything online, so we are able to visit more sites which is a good thing for Seattle’s sewer system.”

– Gary Christiansen, Program Supervisor for the Wastewater Source Control Program, Seattle Public Utilities

Be Right™

AQUATIC
Informatics

Easy, Centralized, & Defensible

FOG Software is purpose-built for Fats, Oils, and Grease management; designed to simplify administration, reduce manual tasks, and speed up program delivery to meet the needs of a growing and evolving FOG compliance program.

Empower a distributed workforce with full FOG Management capabilities and reduce the time to track, enforce, and manage facility's compliance.

Facility & Inspection Management

Save time with streamlined inspections and facility management.

- ✓ Centralize all facility information and custom attributes to easily track and manage inspections, pumpouts, violations, enforcements, communications, and more.
- ✓ Speed up field work with field access to all facility information and pre-built, intelligent custom inspection forms for less data entry and more efficient site visits.
- ✓ Prioritize inspections with custom frequencies per facility and automated scheduling for more productive inspection management.

Compliance & Enforcement Management

Maintain defensibility with a complete compliance history.

- ✓ Quickly see the facility lifecycle — from pump-out to compliance — to understand compliance history at-a-glance, in-depth, or as an exported report.
- ✓ Track violations, enforcements, corrective actions, and their due dates to easily track a facilities return to compliance.
- ✓ Leverage more than just pumpouts to automatically determine non-compliance by using inspection results or other data— or override manually for unparalleled control.

Experience less IT burden by using a cloud solution that doesn't compromise your data's security or your FOG program's integrity.
