

Cable Box Storage System for Cardio Equipment

The **Cable Box Storage System (BVE-CBSS)** is the perfect solution for hiding set top boxes, our CAB (console adapter box) and extenders when the set top boxes are installed in front of cardio equipment in fitness centers. Purchase as a standalone system or add additional track and device boxes as needed.

INCLUDES:

- 24" track
- Track Cover (brushed aluminum and a slate grey track included)
- End strips (for installing in the floor or on top of floor)
- 2 gang device box
- Set top box enclosure and vented top
- Brushed insert
- Track end stop and necessary screws

Use as a standalone system or add additional raceway

Standalone system with Aluminum Track

Standalone system with Grey Track

Aluminum Raceway System

Grey Raceway System

Flexible system that is easily customized depending on your needs.

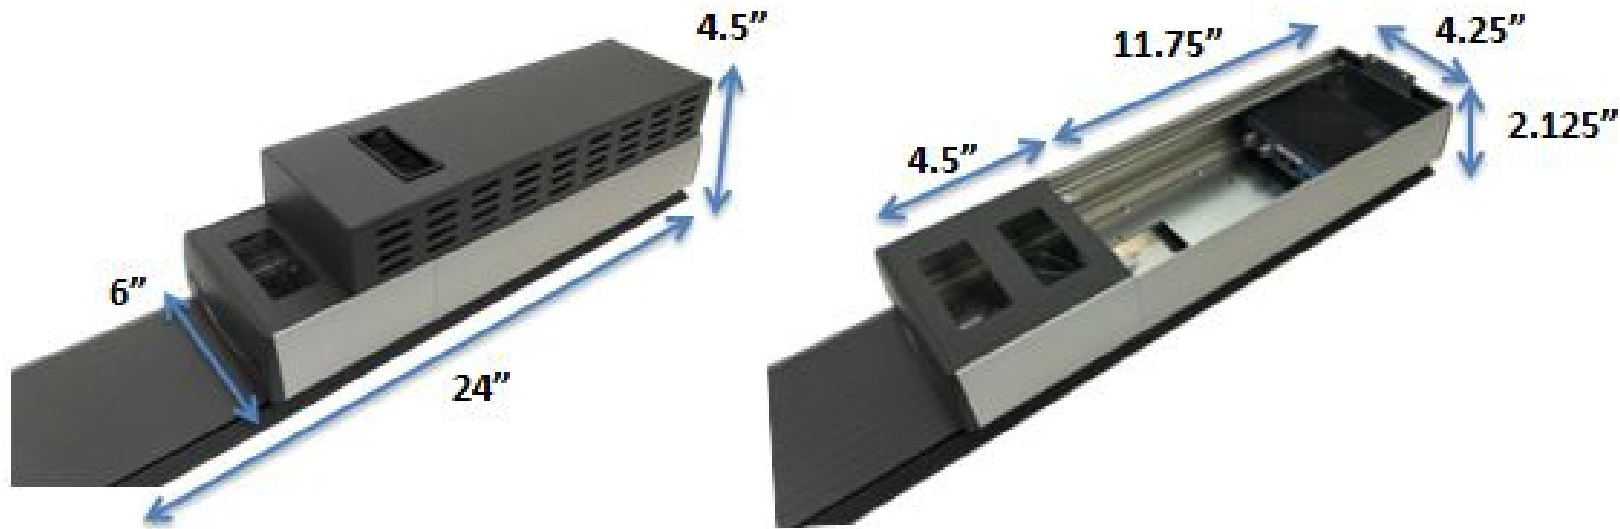

The system includes a 2 gang device box so you decide what receptacles you need.

The brushed insert we include can handle multiple cables including power, cat5/6, Coax, HDMI & more.

Dimensions and set top box compatibility.

The system is designed to support the smaller DTA set top boxes since these are being recommended by most cable providers for cardio equipment applications. Some examples of compatible models are DTA100, DTA250, DC60XU. If you have larger boxes installed currently, contact your cable provider to inquire about smaller set top boxes.

The interior dimensions of the box are:
11.75" L x 4.25" W x 4.50" H

Please note: Since the cable box can be tilted on it's side, the max width can be up to 5.0".
