

# Bronto Stock Program

AERIAL PLATFORMS AVAILABLE FROM STOCK

## Get your Bronto in record time

When you receive a short-notice work order, you need to get to heights fast.

**Your challenge:** Delivery times for aerial work platforms have increased due to global component shortages and other uncertainties, but the worksite can't wait.

**The solution:** We've developed Bronto Stock Program exactly for urgent situations like these. These Brontos are available from stock!

The aerials included in the Bronto Stock Program offering provide rock-solid stability and easy manoeuvrability in different conditions and environments at heights from 114 to 295 feet. They ensure efficient and safe operations with extremely challenging high-rise installations like antennas, generators, wind turbines, and more.

They are manufactured in advance with the same high-quality standards as all other Brontos and at the same factory in Finland. Made for our customers in need, without rush.

### Tired of long delivery times?

If you need a Bronto fast, scan the QR code to leave your contact details. We'll get in touch with you.

# Success story: An aerial work platform with a one-week delivery time

## Building an offshore windfarm on a tight schedule

The benefits of Bronto Stock Program were on full display when UK-based access provider, Clerkin Elevation, needed a 295-foot work platform on very short notice. The reason? A major project at Harland & Wolff, a company specialised in marine design and building located in Belfast, Northern Ireland. The project involved preparing offshore windfarm jacks, which were to be planted in the North Sea on a tight schedule. For this, H&W had many large platforms from several access companies on long-term rental – but not quite enough.

Clerkin Elevation, who offers access solutions in Ireland and the UK, placed the order for a 295-foot Bronto at the end of January. Some small modifications were made, and an S90HLA was prepared for immediate shipment from Finland. It was delivered directly to the work site and was working full time within a week from the order.

Clerkin and his crew were so convinced by the performance of the S90HLA that they bought another one shortly thereafter.

*"The S90HLA quickly became the favourite aerial work platform on site – among operators and customers alike – due to the smooth operation, added reach at heights and reliability. These, along with the short delivery times, were the main reasons we purchased a second one."*

**Joe Clerkin**, Clerkin Elevation Ltd.

*"We have seen more and more of these kind of short-notice work sites popping up, and it's great that we can now offer a solution for them."*

**Ian James**, Key Account Manager, Bronto Skylift.

Safety above all

Bronto Skylift is a trusted global supplier of truck-mounted hydraulic platforms. We design, manufacture, sell and service appliances for rescue and firefighting, as well as for industrial access.

Our product range includes approximately 50 models with a range of 55 to 367 feet of working height. The advanced modularity also allows for numerous client-specific modifications. During the past 50 years, we have delivered over 7,000 platform units to fire brigades and industrial customers throughout all the continents in more than 120 countries.

Our headquarters and production plants are situated in Finland. We also have subsidiaries in Germany, Sweden, Switzerland and the US. The company is part of the Japan-based Morita Holdings Corporation.
