

Fall Arrest System

The Fall Arrest System option is an option for our EX booms.

A Bolt-On Fall Arrest System can be bolted to existing JLG platforms in the field.

The feature allows an occupant to exit the platform at height and step onto adjacent structures while being tied off to an approved lanyard anchor point on the platform. The Bolt-On Fall Arrest System consists of two large steel brackets securing a 6-foot cable with a ring that can move from one end of the cable to the other. Attaching the lanyard to the ring improves maneuverability and allows the operator to perform tasks outside of the platform.

It meets both ANSI A92.5 and CSA B354.4-02 standards and can be installed by a qualified service representative to any 36x72 inch or 36x96 inch platform mounted to a JLG boom lift.
