

Bypass Blow Valve

BD800

Reliable Tight Shut-off

47%* of customers who perform bypass blowdown have experienced **internal leakage of valves.**

* Research by TLV CO., LTD.

Periodic maintenance of steam system is followed by blowdown on bypass lines by supplying high pressure steam at start-up. However, globe valves often installed on bypass lines are commonly susceptible to internal leakage as the build-up of dirt and scale and the erosion of valve trim prevent the valve from closing completely. The BD800 was developed to eliminate these problems.

API 598 valve with self-cleaning valve trim, clears scale build-up during operation

Valve construction enables effective scale removal for tight shut-off

When the valve cannot be fully closed due to rust and scale build-up on the valve head or seat, simple and effective in-line scale removal restores steam tight sealing performance.

Scale is scraped off and flushed with steam by valve operation

Highly durable materials prevent erosion

Valve stem and seat are constructed from durable materials to prevent erosion.

Wall thinning caused by steam leakage from eroded valve trim.

Valve stem, valve seat and other key parts are replaceable

Parts worn by years of use can be replaced, extending product service life.

Spanner cap is used in place of the valve handle

- Protects valve stem from weather and foreign matter, **preventing the valve stem from sticking**
- For applications with infrequent valve operation, the spanner cap can be fixed to the body to **prevent erroneous operation**

Fixed to body

- Can also be used **as a valve handle**

Adjusting the valve aperture

Tightening the gland retainer

Applications

Bypass or other lines: for blowdown or elimination of steam locking

- Applicable fluids: Steam, water, air
- Maximum Operating Pressure PMO: 925 psig
- Connections: Screwed, socket weld, flanged

- Material: Stainless steel ASTM A182 F304
- Size: 1/2, 3/4, 1 in
- Maximum Operating Temperature TMO: 800 °F

- Applicable standards: API 598, ASME B16.34
- Maximum Cv Value: 3.5 (US)

CAUTION

To avoid abnormal operation, accidents or serious injury, DO NOT use this product outside of the specification range. Local regulations may restrict the use of this product to below the conditions quoted.

CAUTION

DO NOT DISASSEMBLE OR REMOVE THIS PRODUCT WHILE IT IS UNDER PRESSURE. Allow internal pressure of this product to equal atmospheric pressure and its surface to cool to room temperature before disassembling or removing. Failure to do so could cause burns or other injury. READ INSTRUCTION MANUAL CAREFULLY.
